

Building Chatbots with Google Dialogflow

INTRODUCING CHATBOTS IN DIALOGFLOW

Janani Ravi

CO-FOUNDER, LOONYCORN

Overview

Machine learning has made possible bots which can conduct intelligent conversations

Technologies underlying bots are complex but platforms make building these bots simple

Google's Dialogflow (formerly api.ai) offers an easy way to build sophisticated chatbots

Where Would You Use Chatbots?

A chatbot is a program that can
conduct an **intelligent**
conversation

Convincingly simulate human
behavior and pass the **Turing** test

Help Navigating a Site

**Can't find what
you're looking for?**

**Chat window pops up
- just ask questions!**

Help Navigating a Site

Chat is usually
powered by a bot

Customer Support for Your Order

**Order not received
from your favorite e-
commerce site?**

**Call customer support
on the phone**

Customer Support for Your Order

**Order not received
from your favorite e-
commerce site?**

**Chat on the site, track your
order using an intelligent bot**

Weather bot

Grocery bot

News bot

Personal finance bot

Shopping bot

Chatbots for Business

Chatbots make interacting with sites
and apps natural and accessible

Prerequisites and Course Outline

Course Outline

Introduction to chatbots

Building blocks

- Agents, expressions, entities, parameters, actions, responses

Dialogs for conversations

- Maintaining context, linear and non-linear dialogs

Fulfillment using external APIs

- Cloud Functions in Firebase, Webhooks using AWS Lambdas

Integrations with 3rd party apps

Prerequisite Courses

Basics of Programming with Javascript

Related Courses

Creating Voice and Chatbots That Work Everywhere

Getting Started with Building Bots with Microsoft's Bot Framework

Software and Skills

Understand how to work with RESTful APIs

Be comfortable with Javascript programming

Introducing Dialogflow

Types of Chatbots

Rule Based

Basic, know only about rules that have been pre-programmed

AI Based

Intelligent, learns from conversations using ML techniques

Types of Chatbots

Rule Based

AI Based

Intelligent, learns from conversations using ML techniques

A Little History

2011: Speaktoit developed an intelligent personal assistant for mobile phones

2014: Speaktoit released api.ai to third party developers

2016: Google buys Speaktoit to to power Google Assistant

2017: api.ai is renamed to Dialogflow

Dialogflow is Sophisticated

Build natural, rich conversations with an intuitive UI

Uses machine learning to understand what users are saying

Each ML model is unique to an individual user's bot

Dialogflow is Cutting Edge

Supports 14+ languages

Develop in 16 programming languages

SDKs to work with web apps, mobile apps and wearables

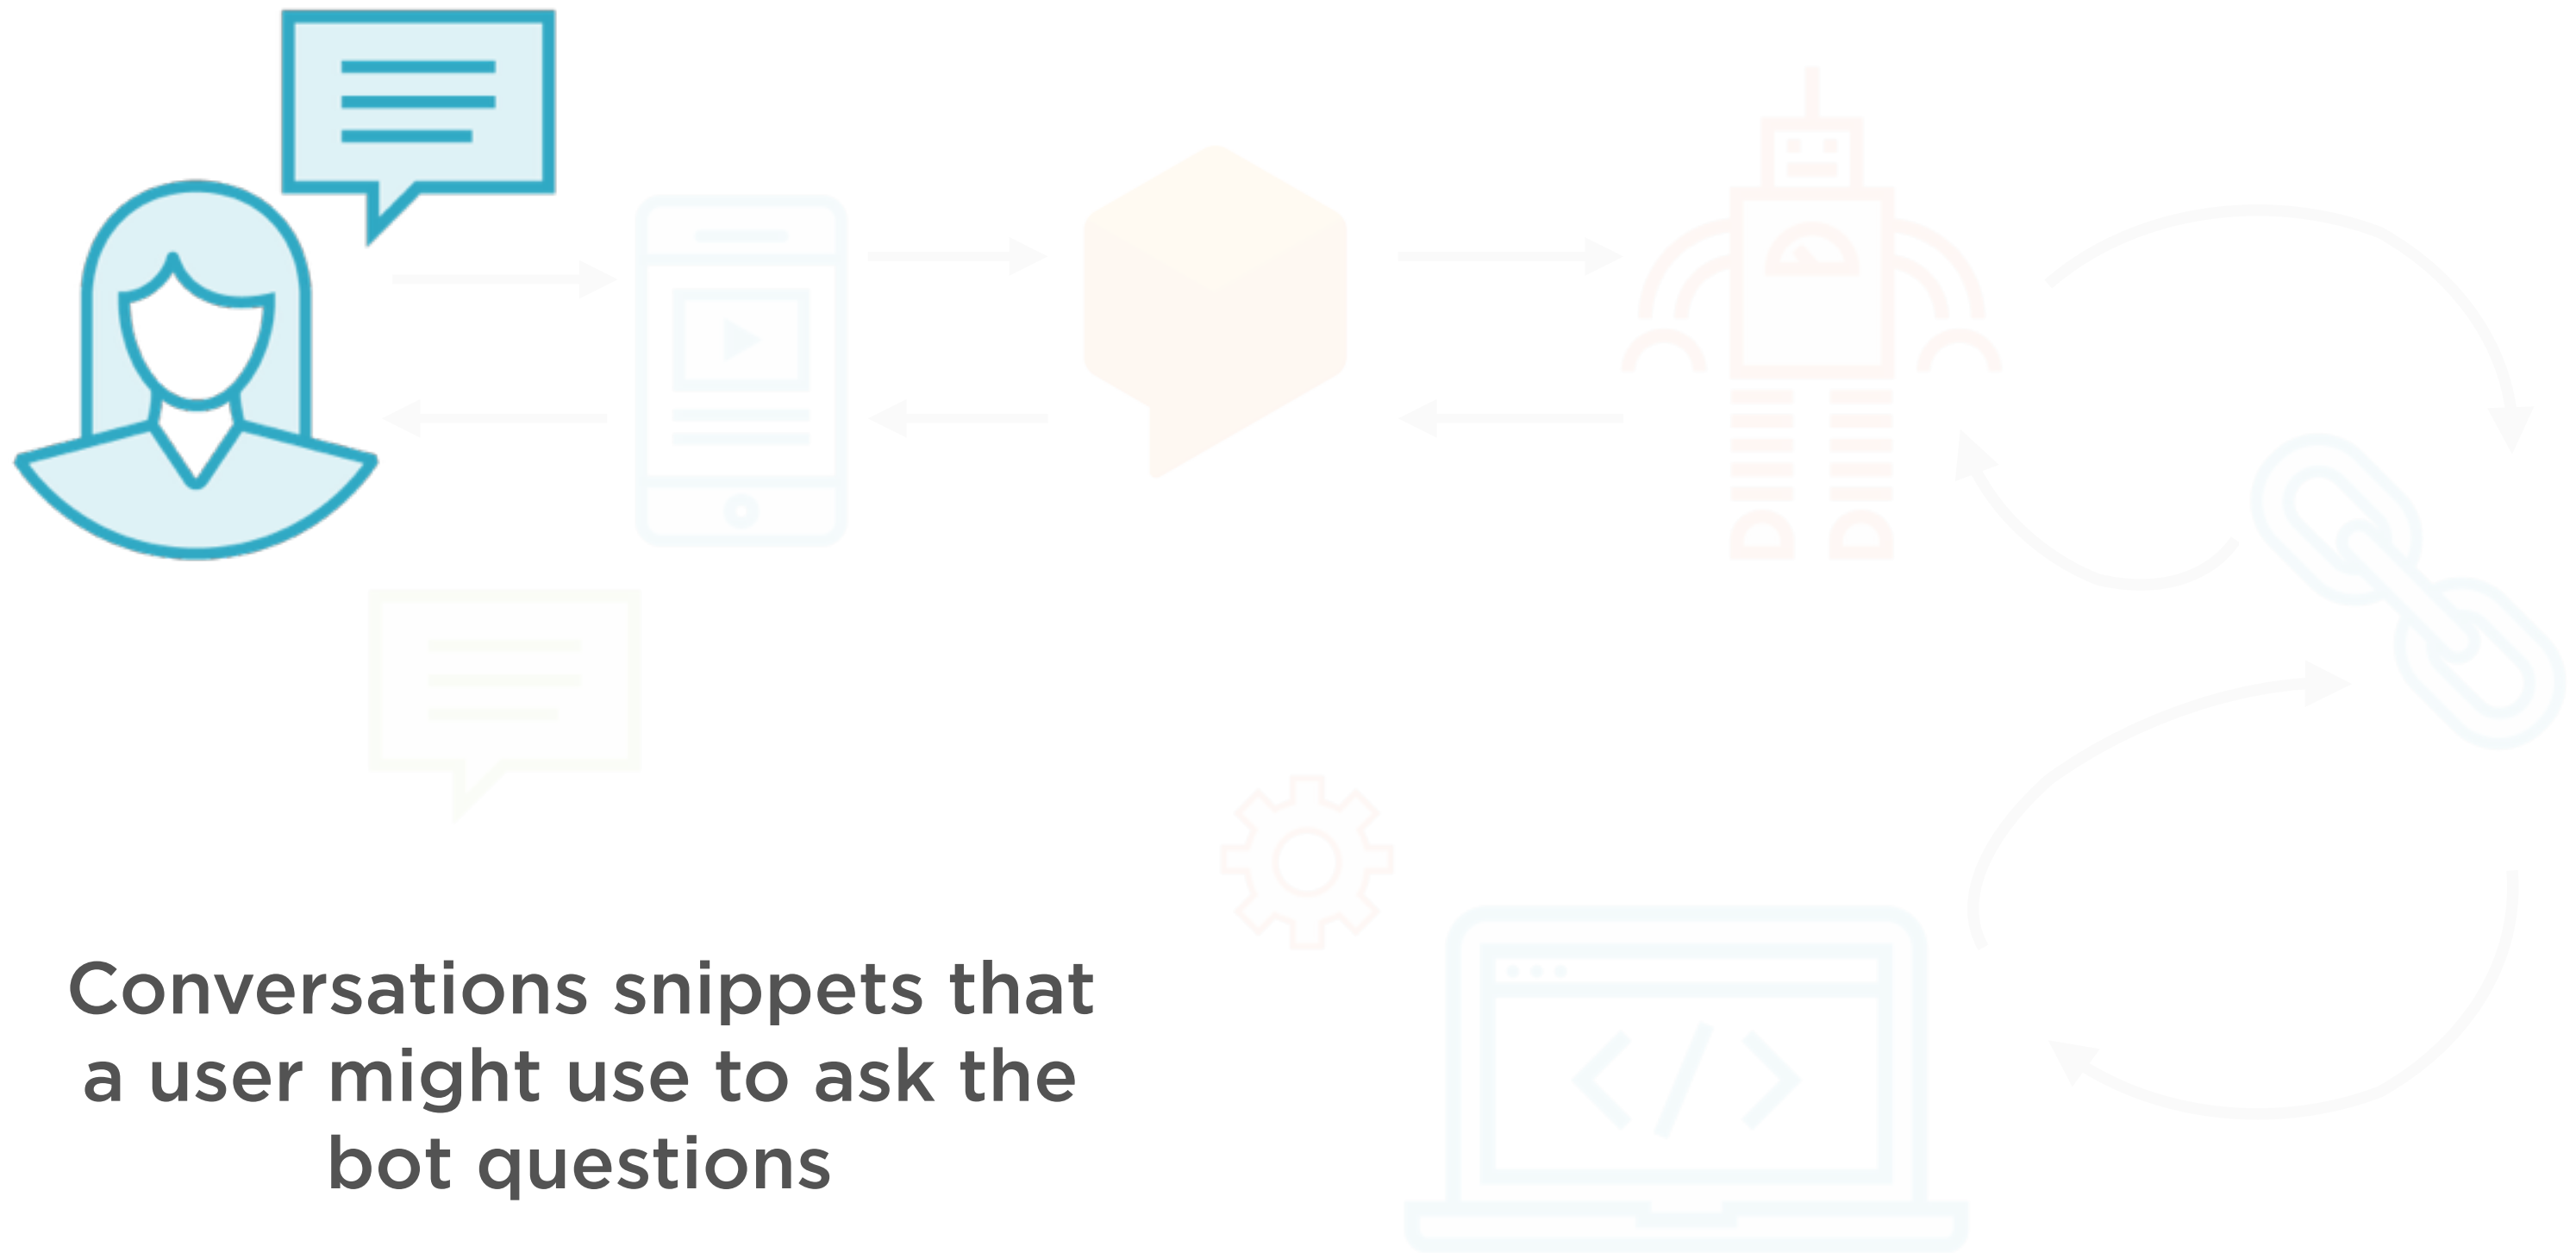

Integrates with 14 major chat platforms such as Slack, Cortana, Alexa, Facebook etc

The Big Picture

Flow of Conversation

User Expressions

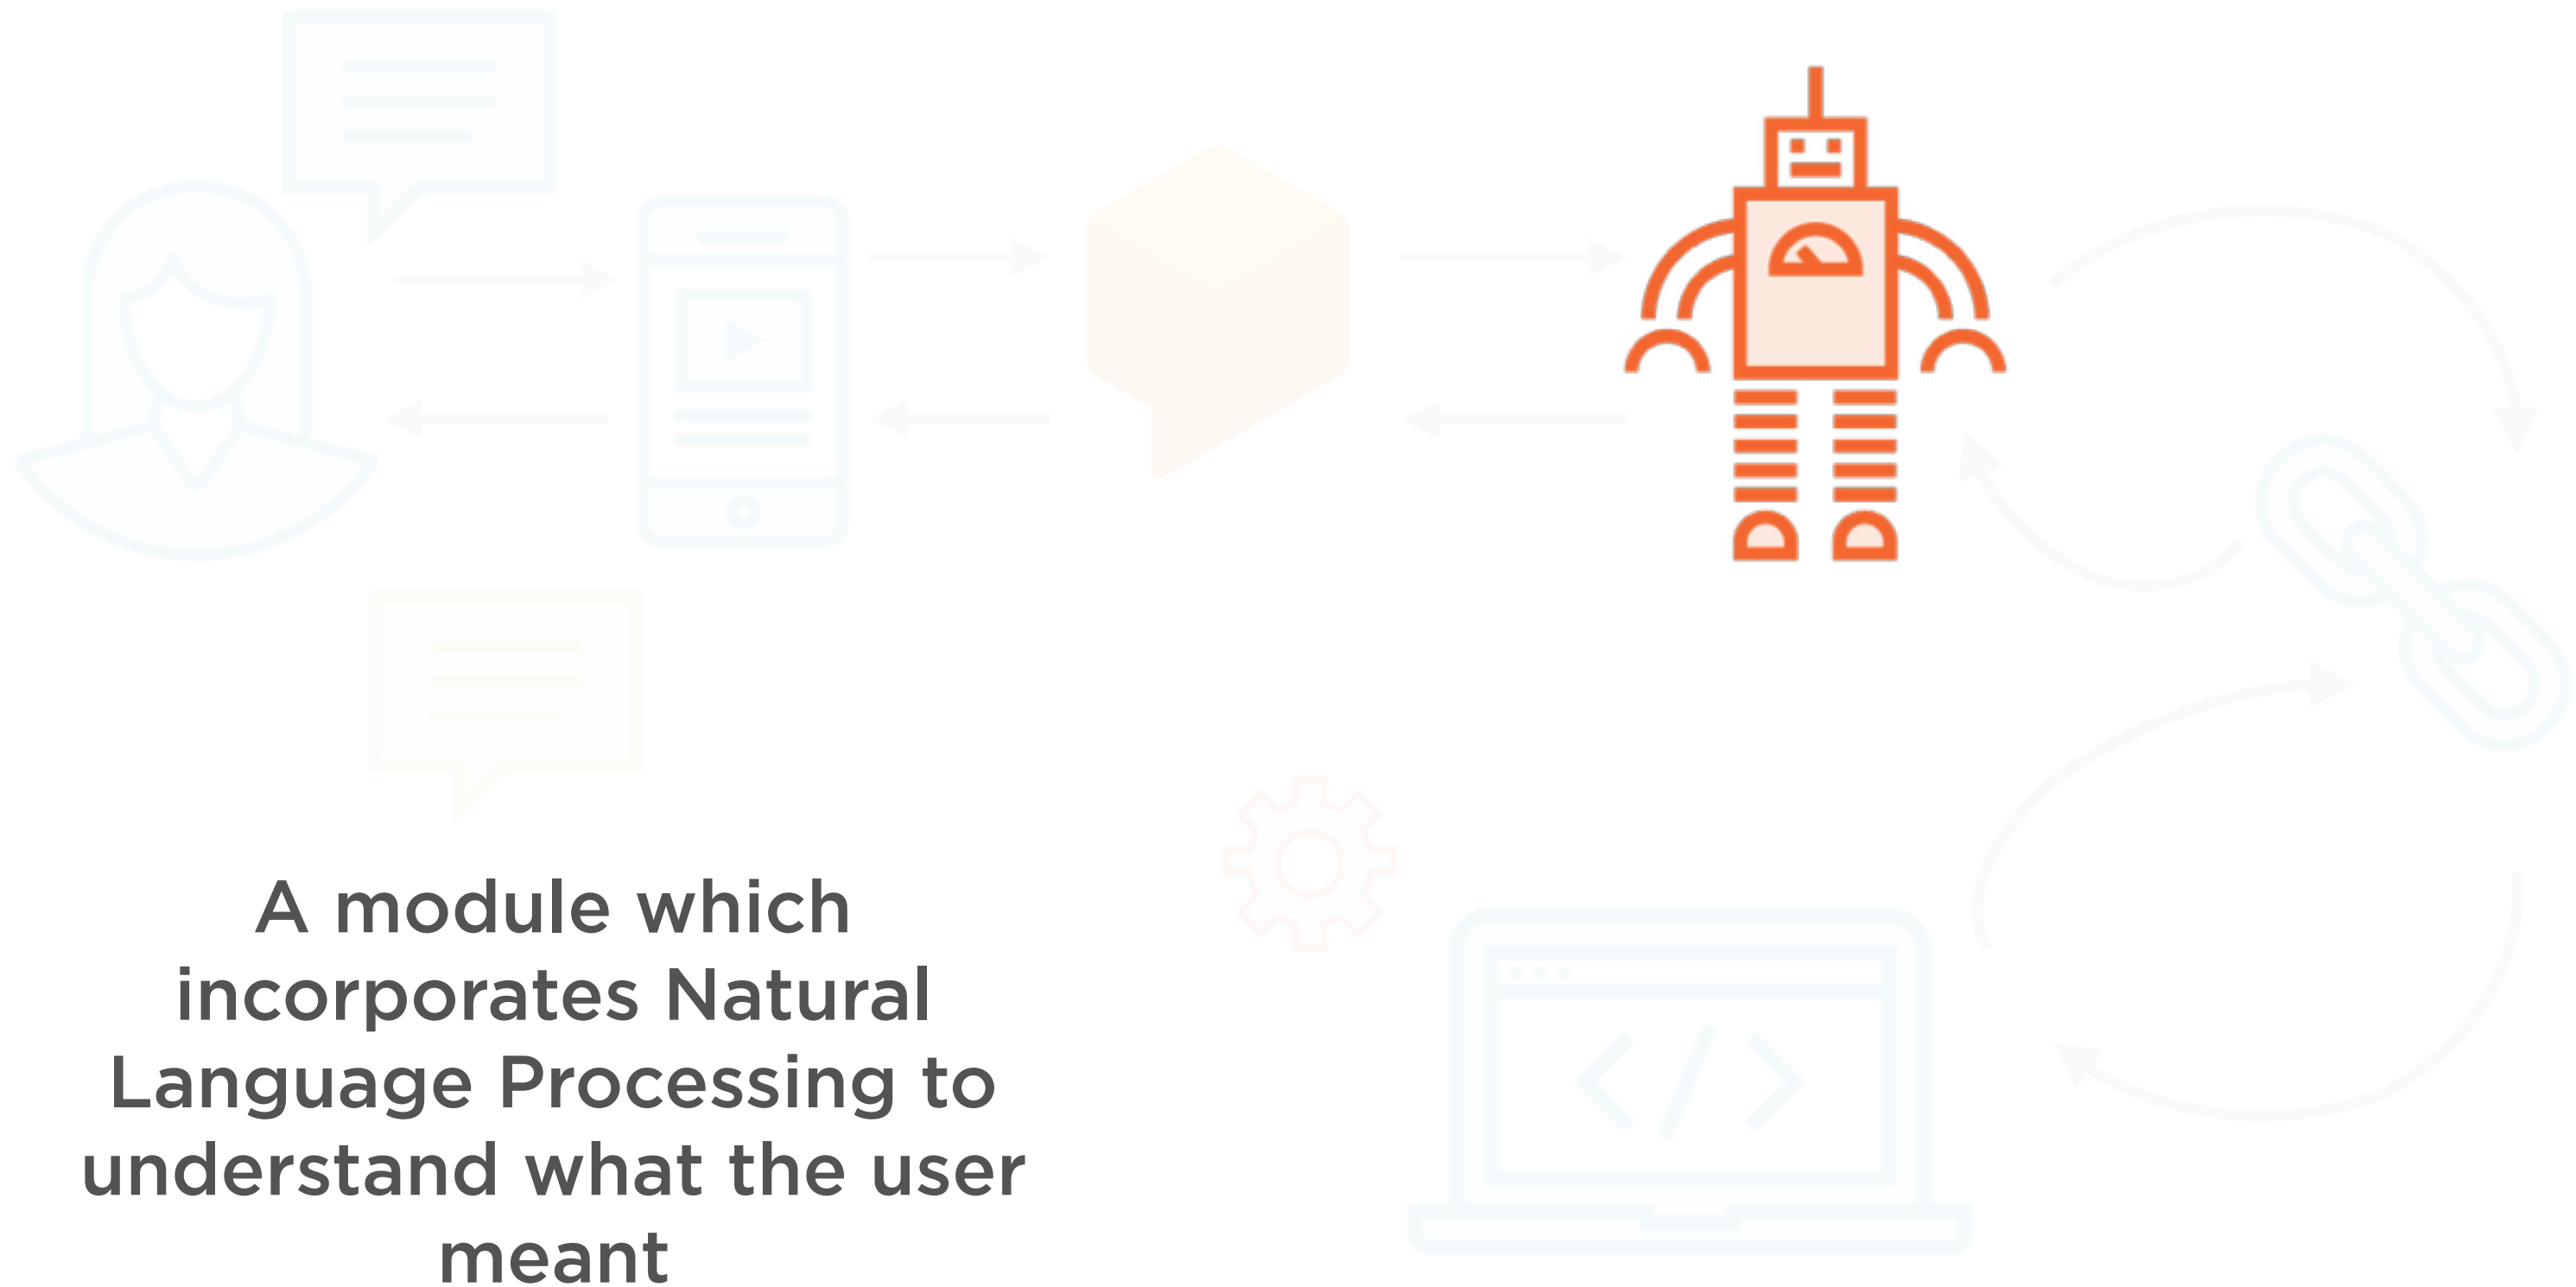

Dialogflow Integrated with Apps

**Slack, Kik, Viber, Twilio,
Skype, Google Assistant**

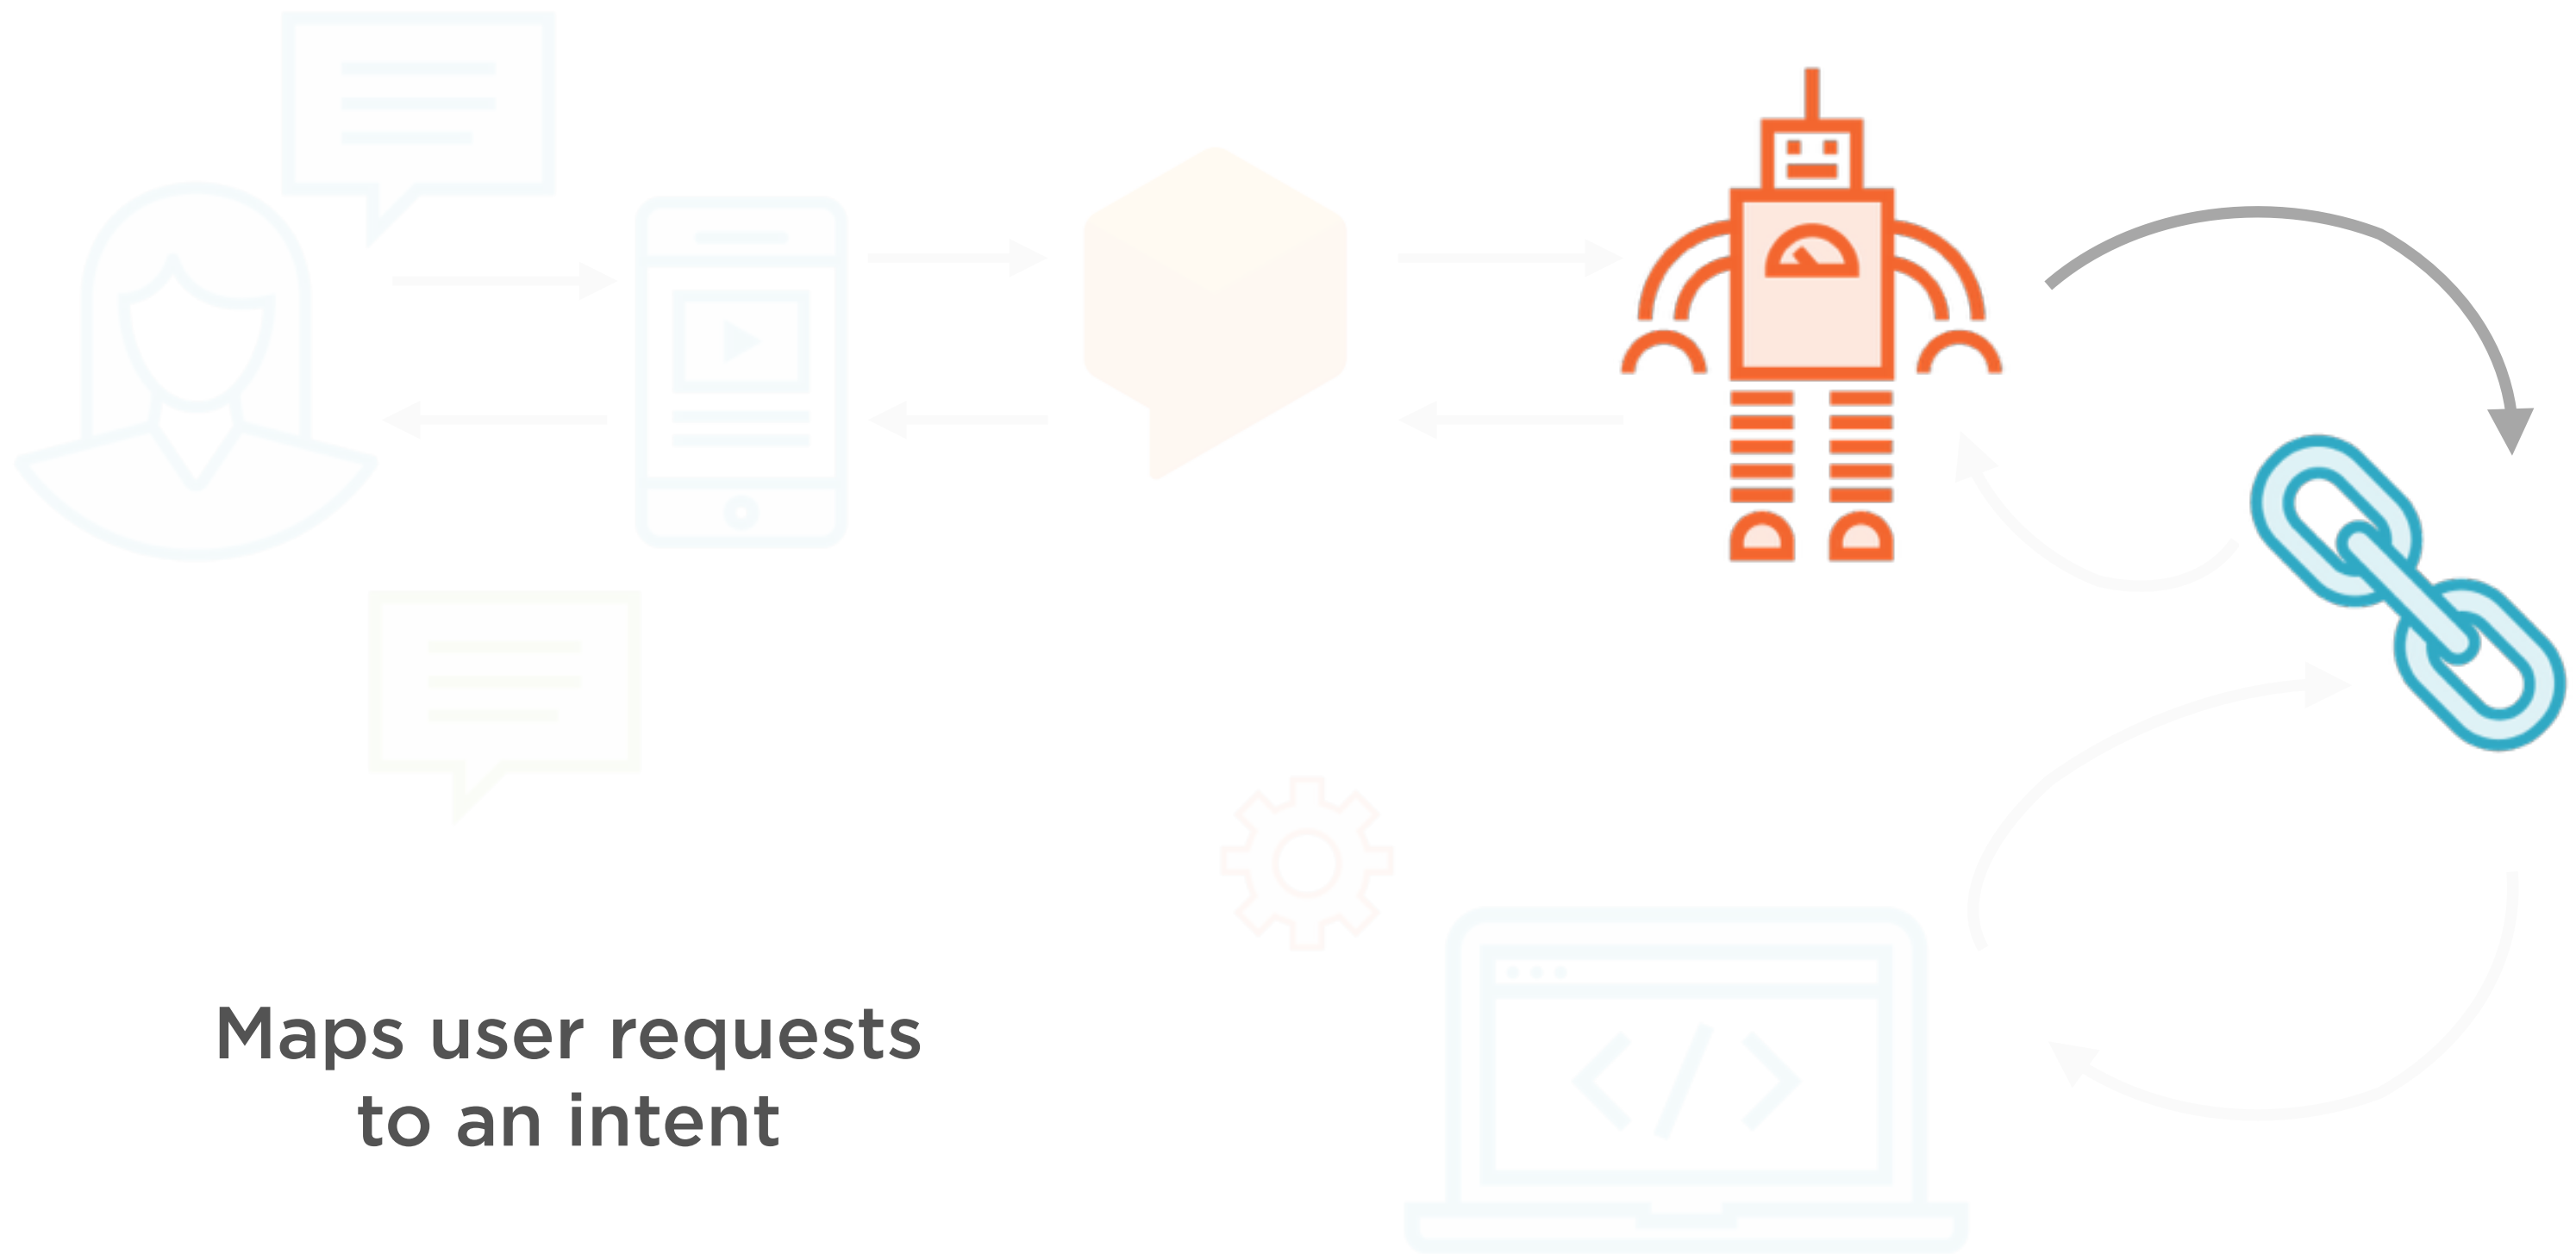

Agent

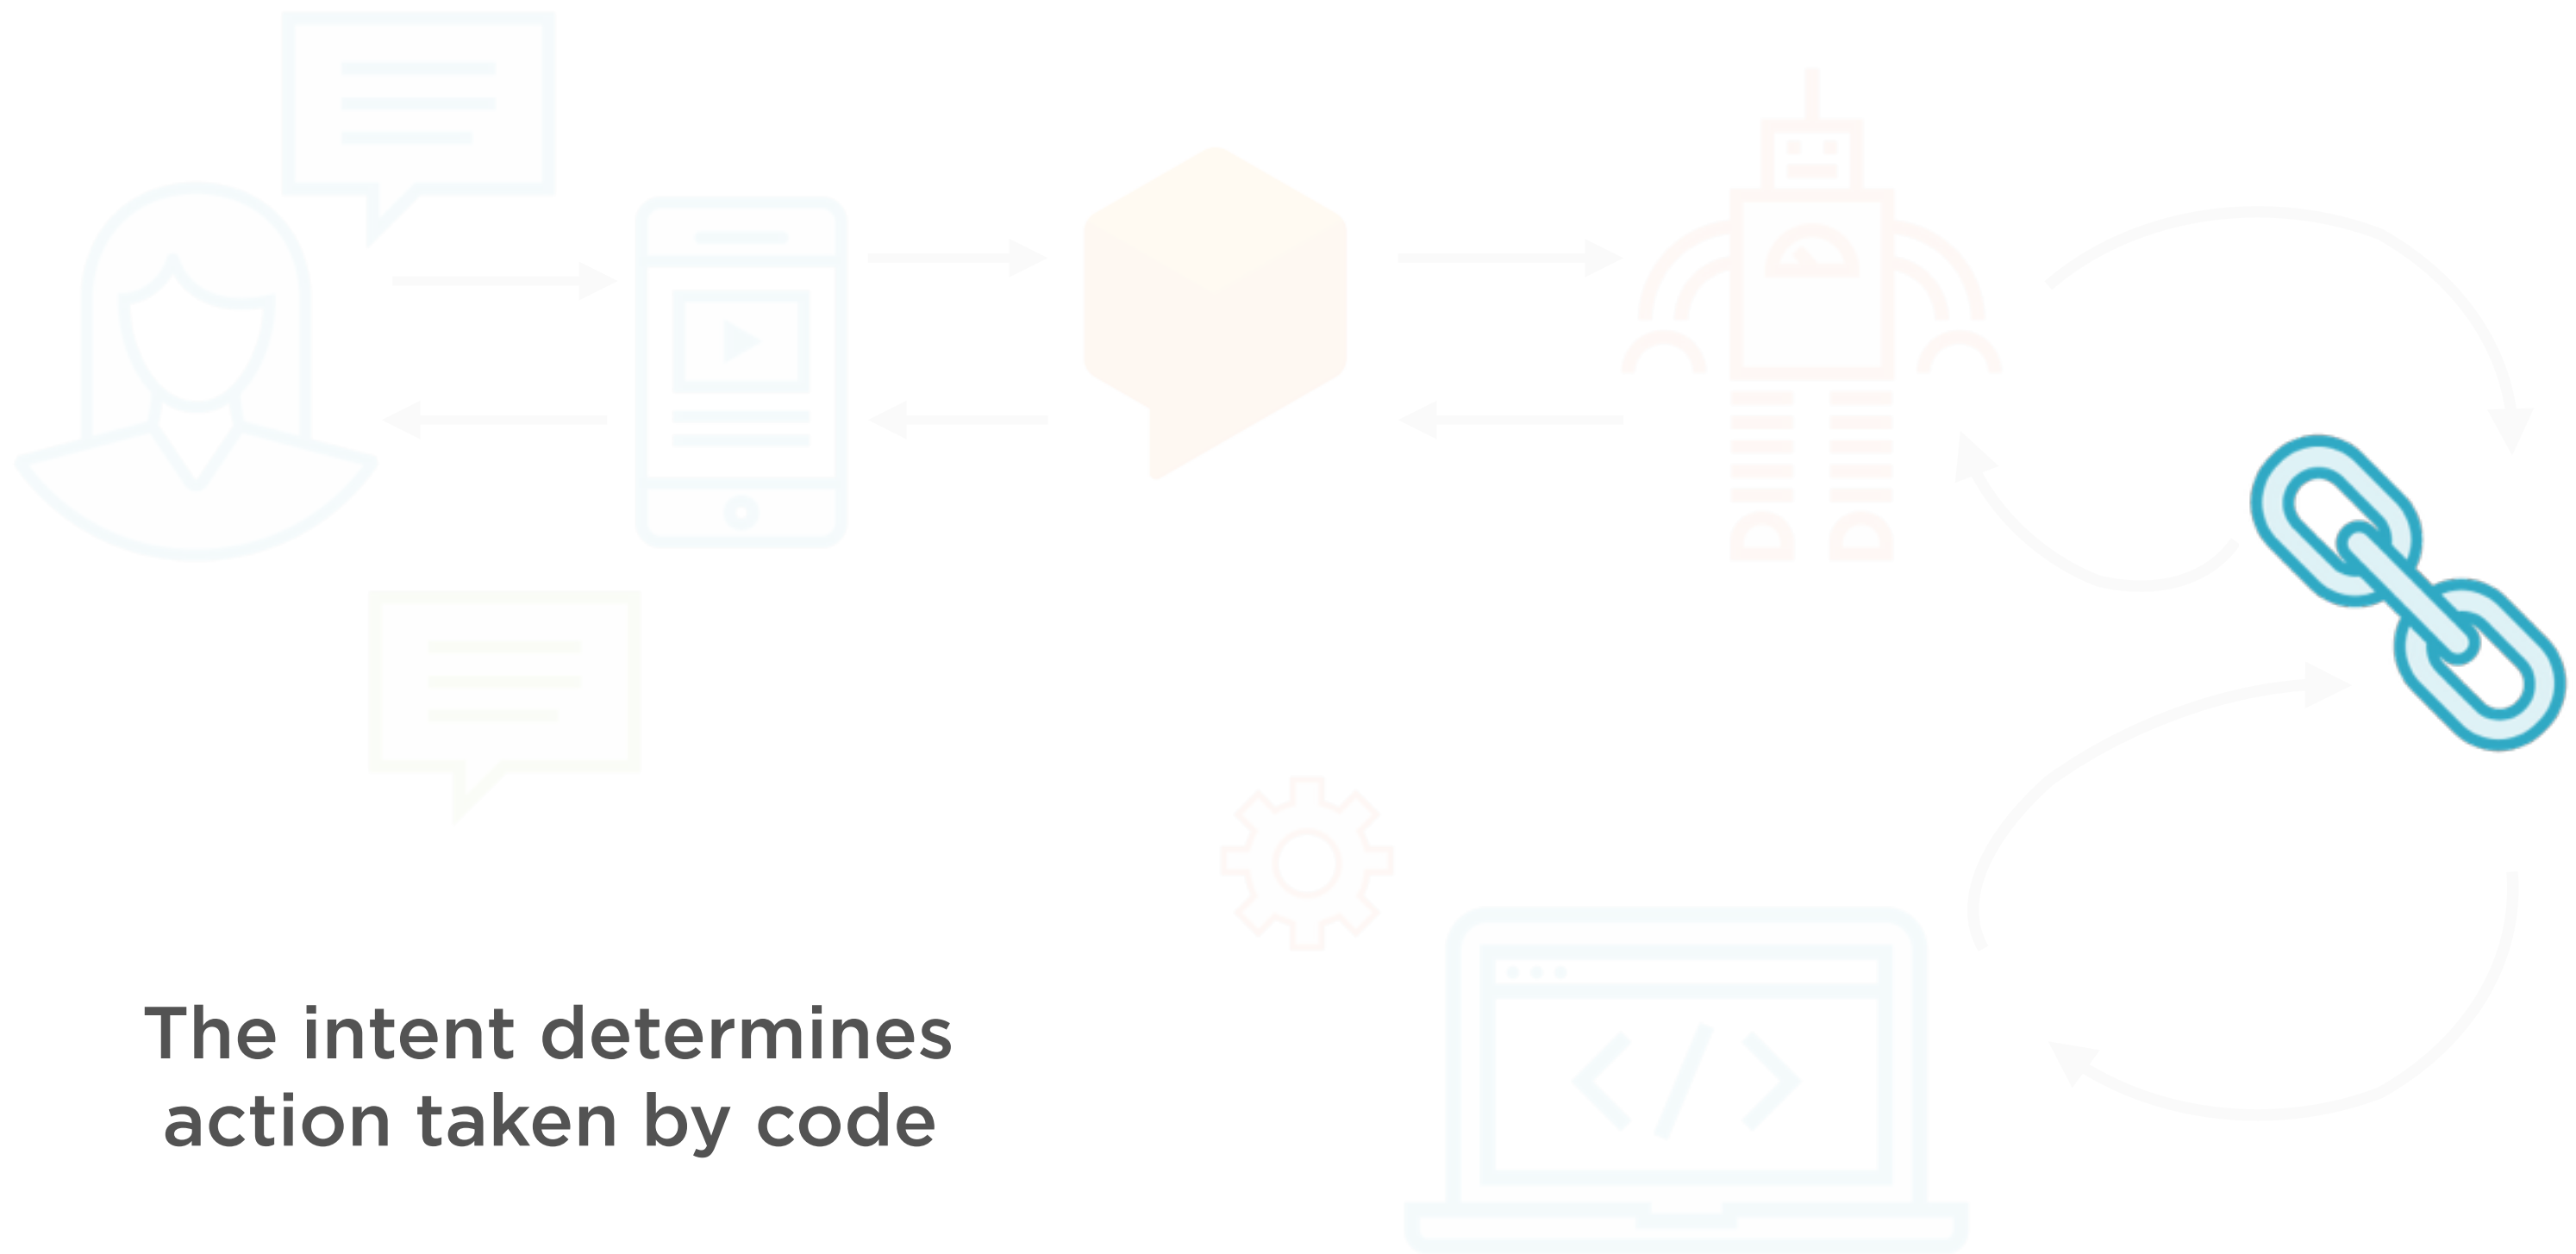

Agent

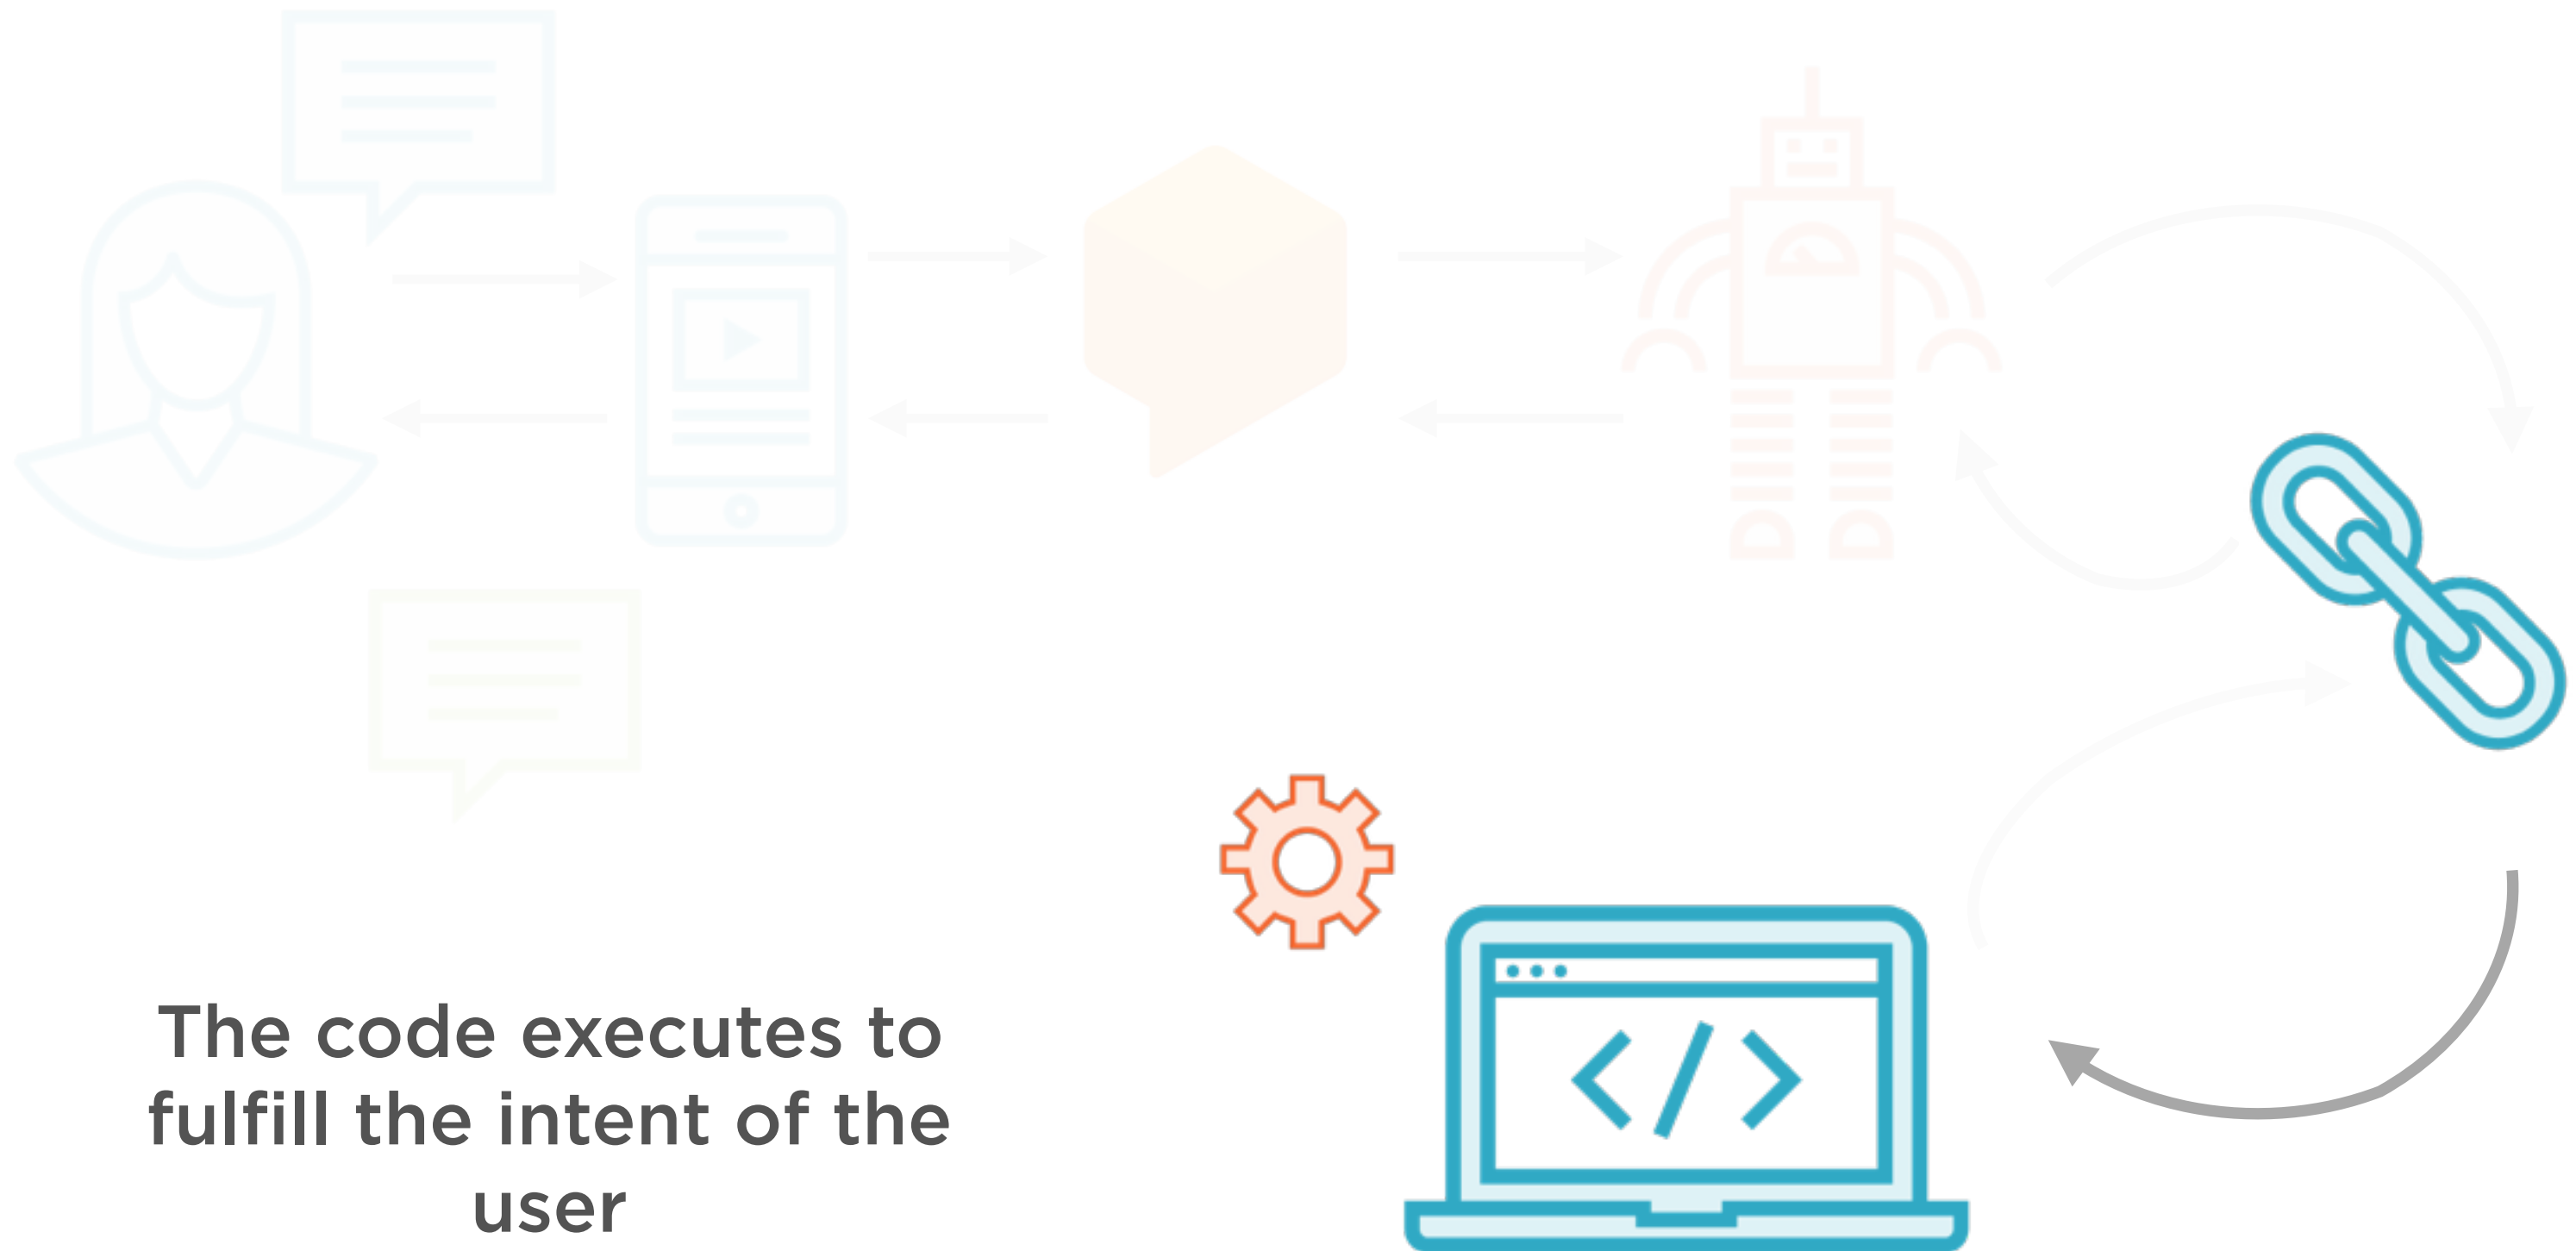

Intent

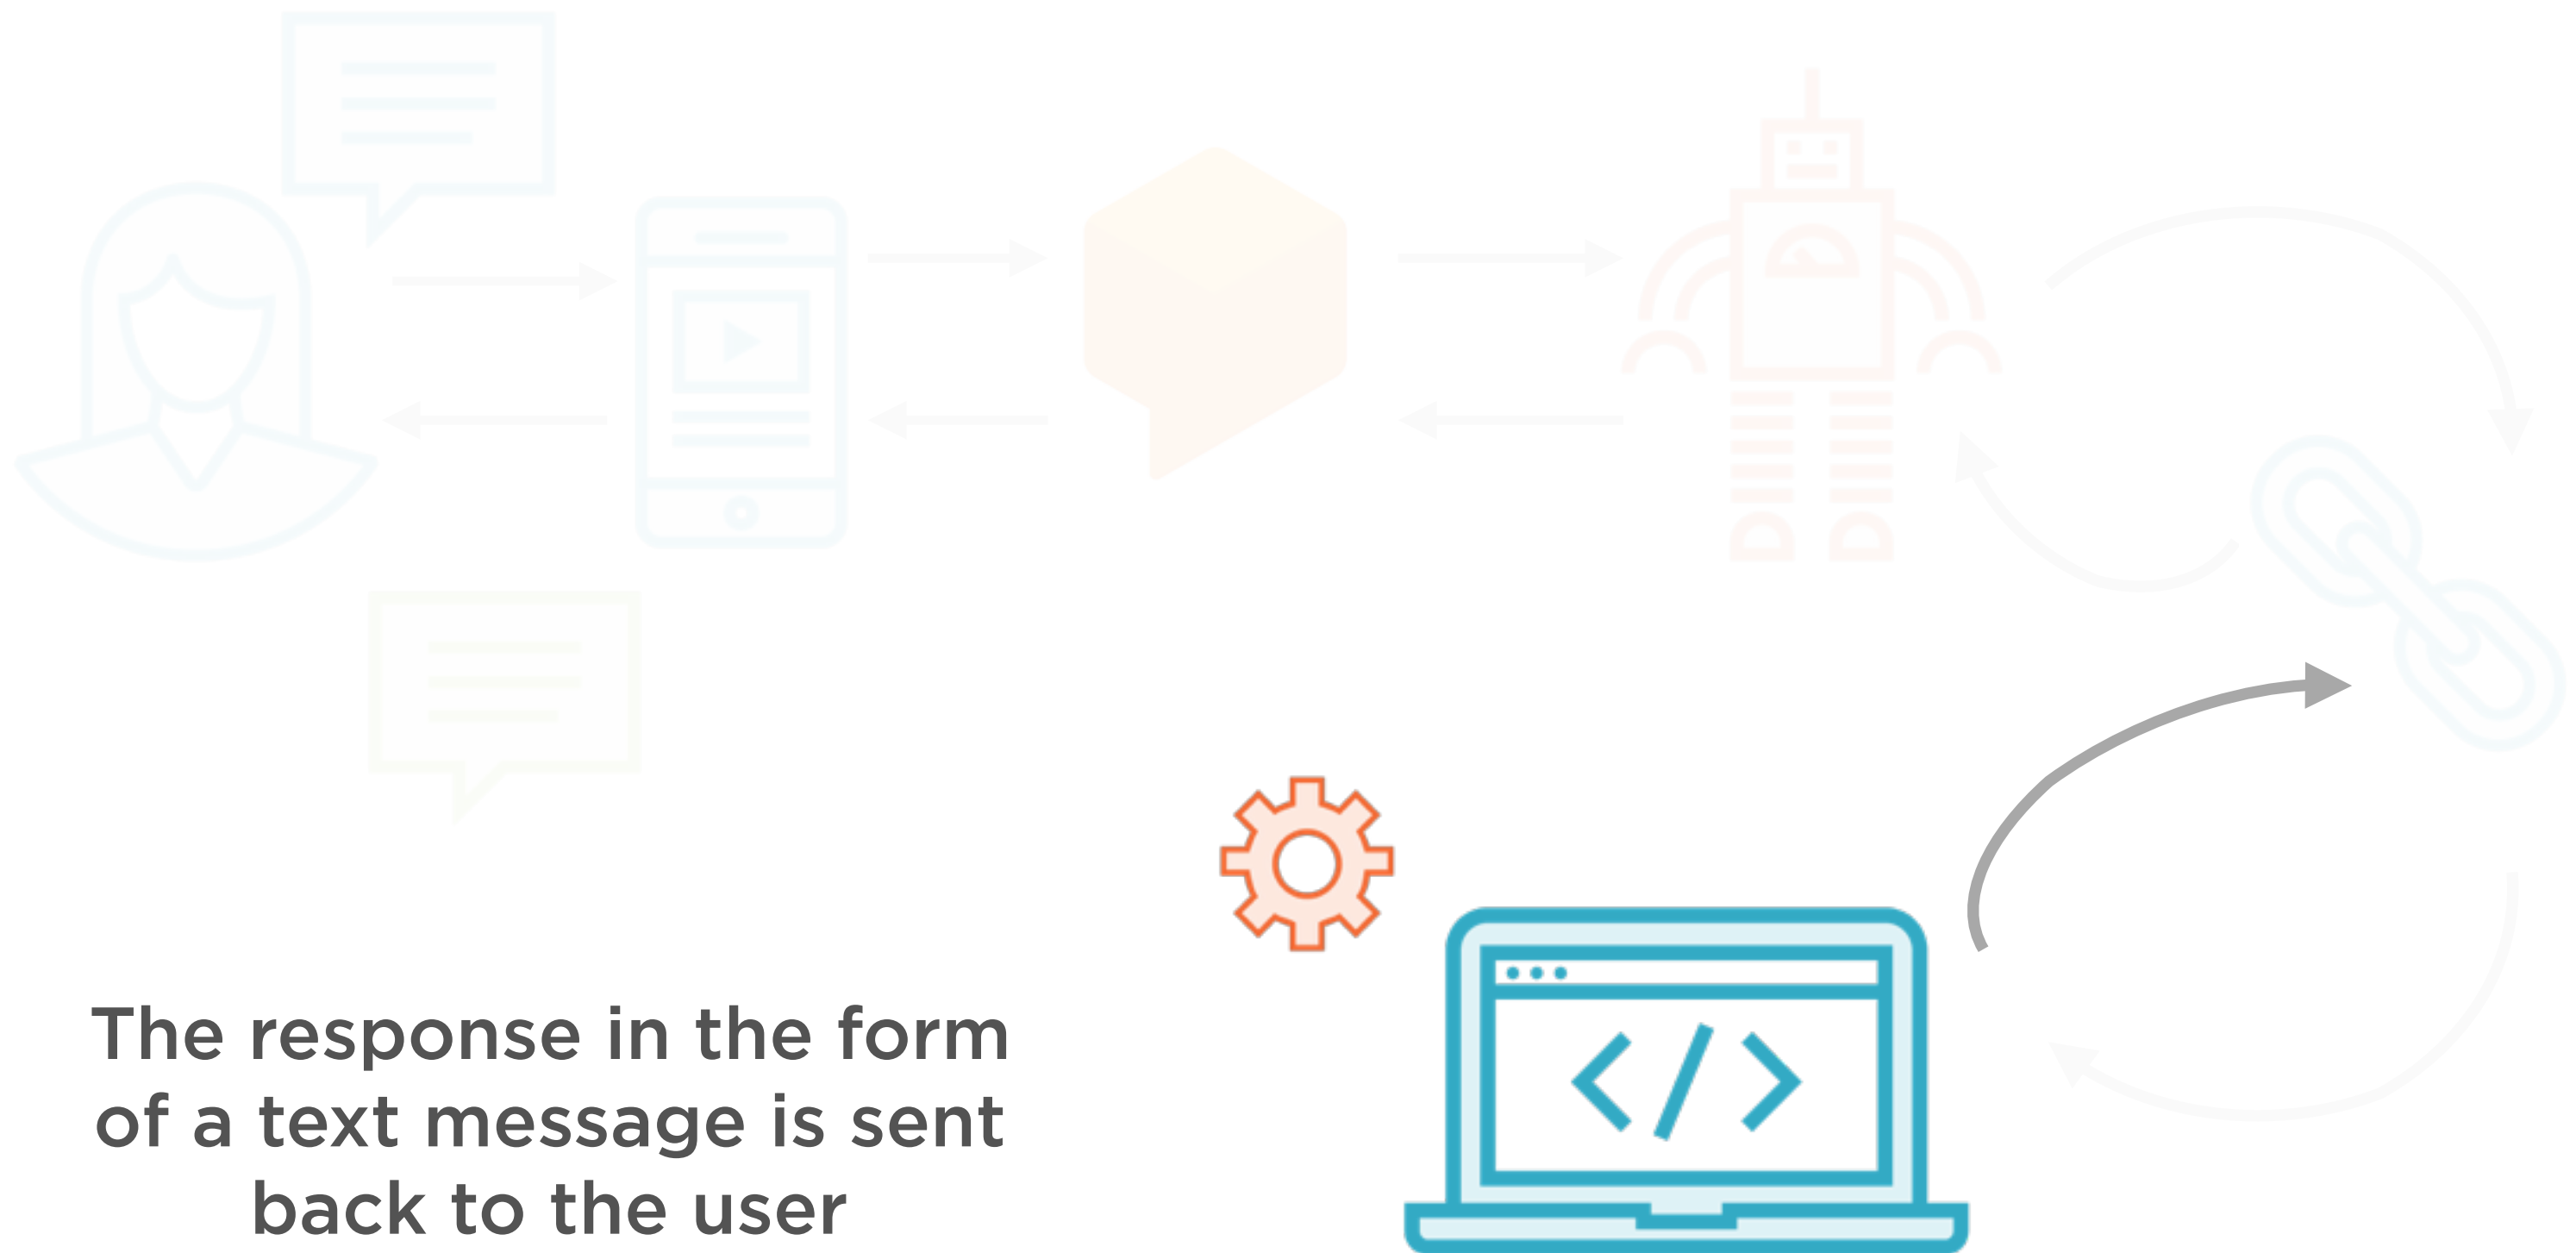

Intent

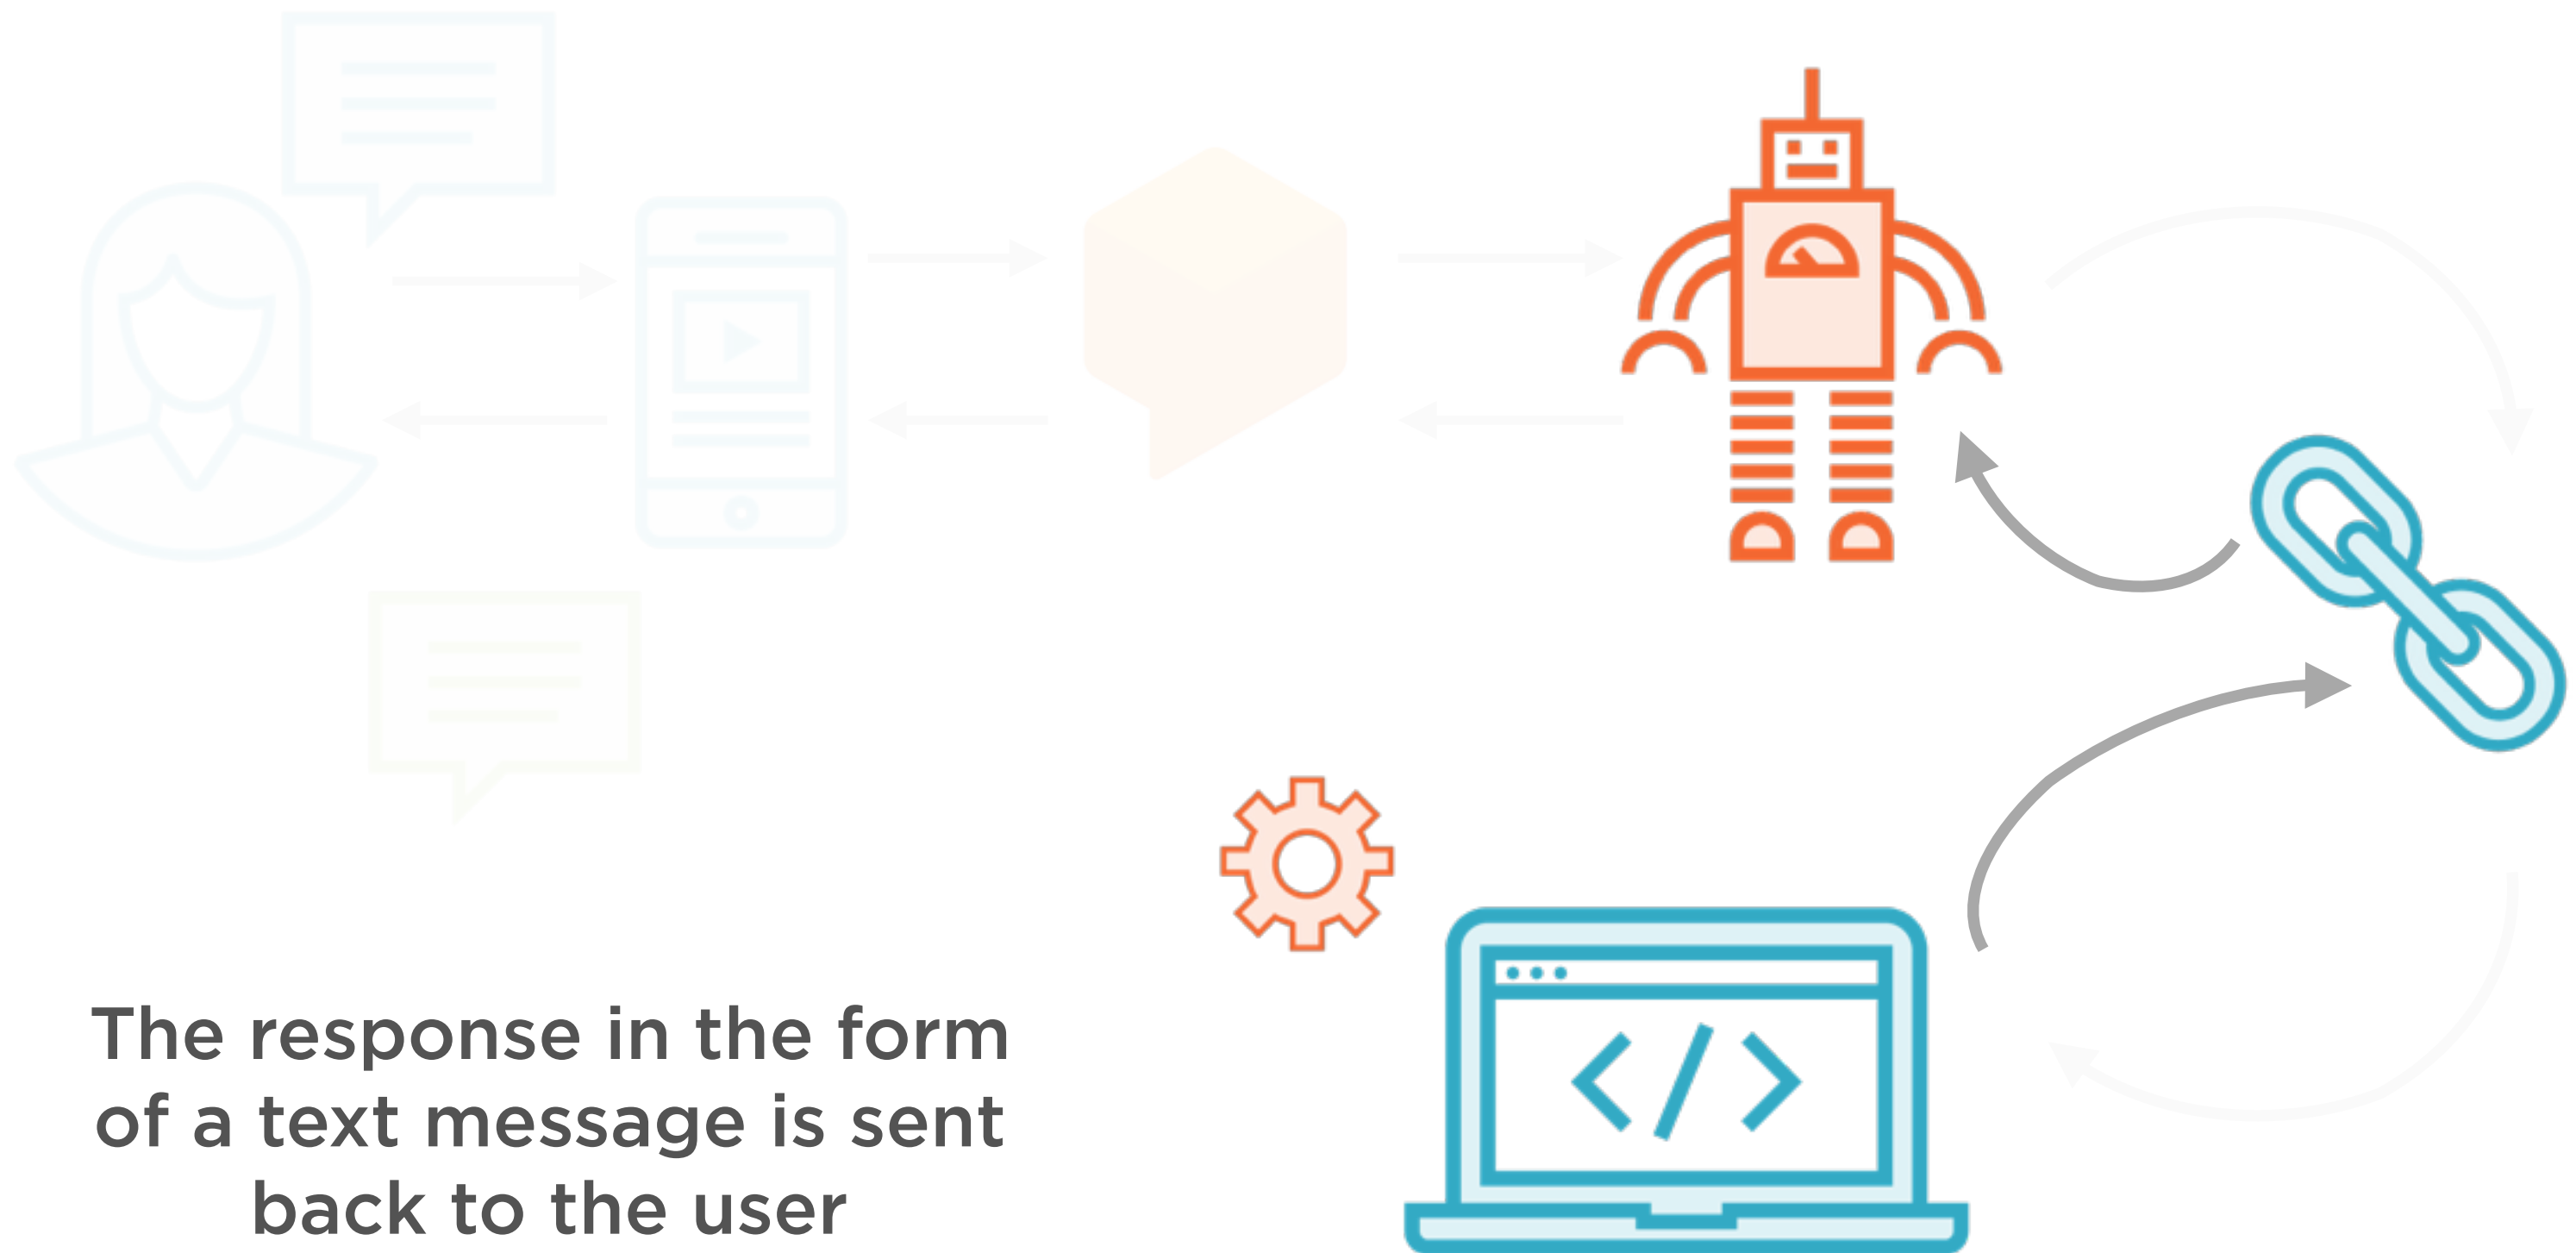

Fulfillment

Response

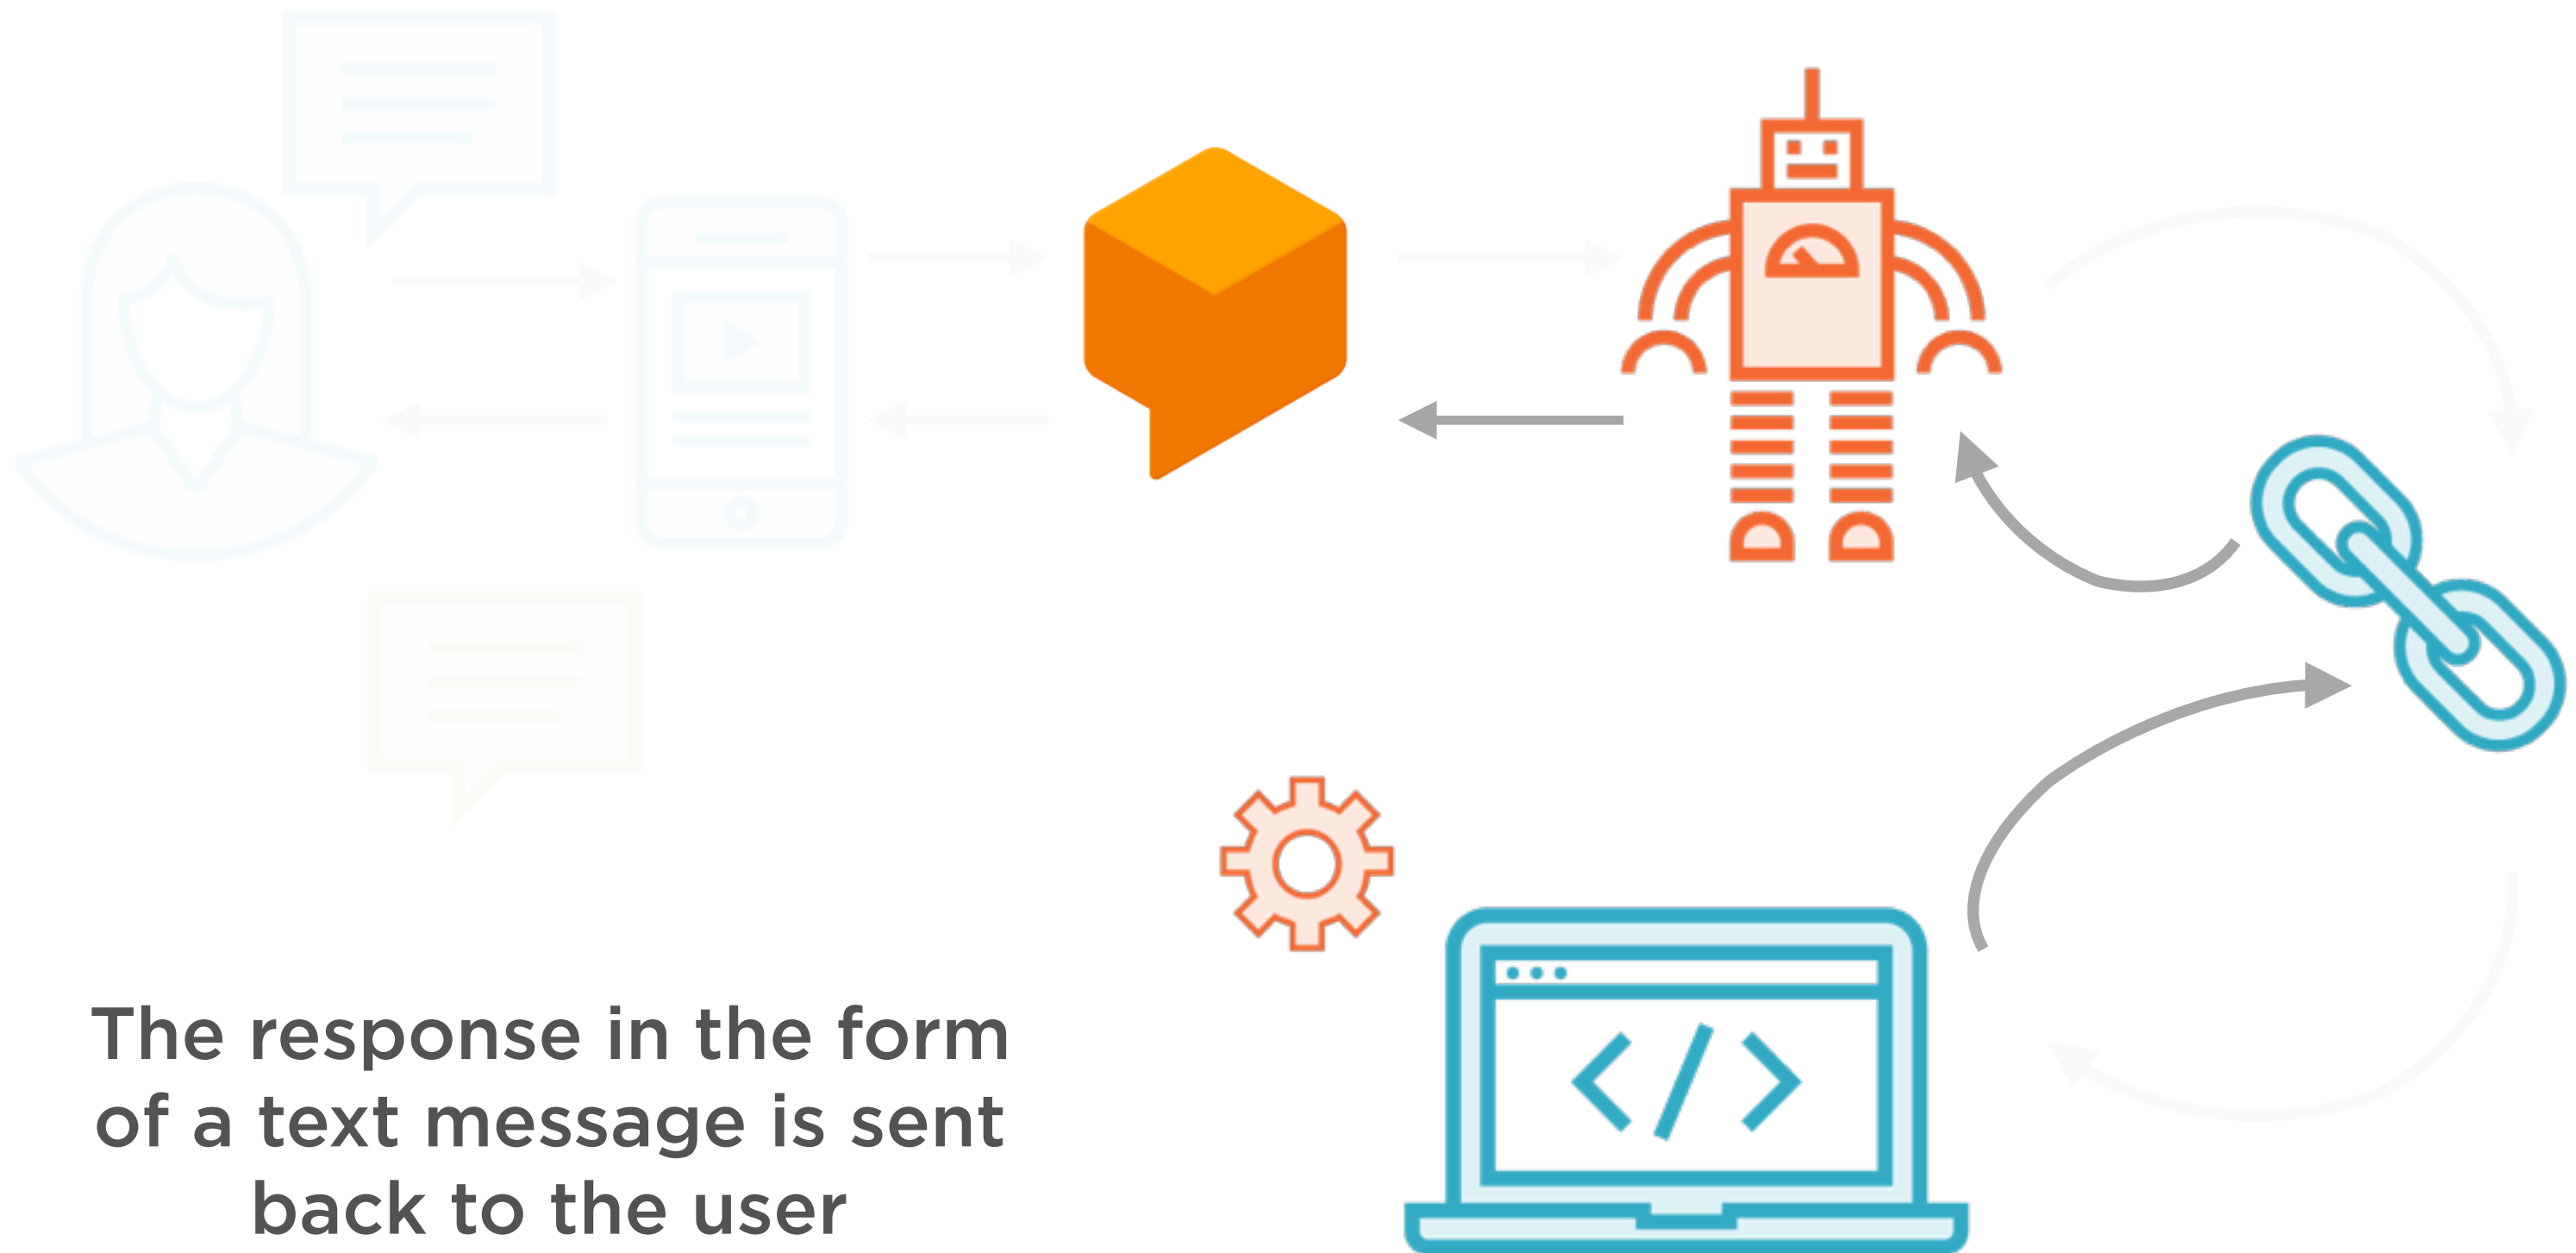

Response

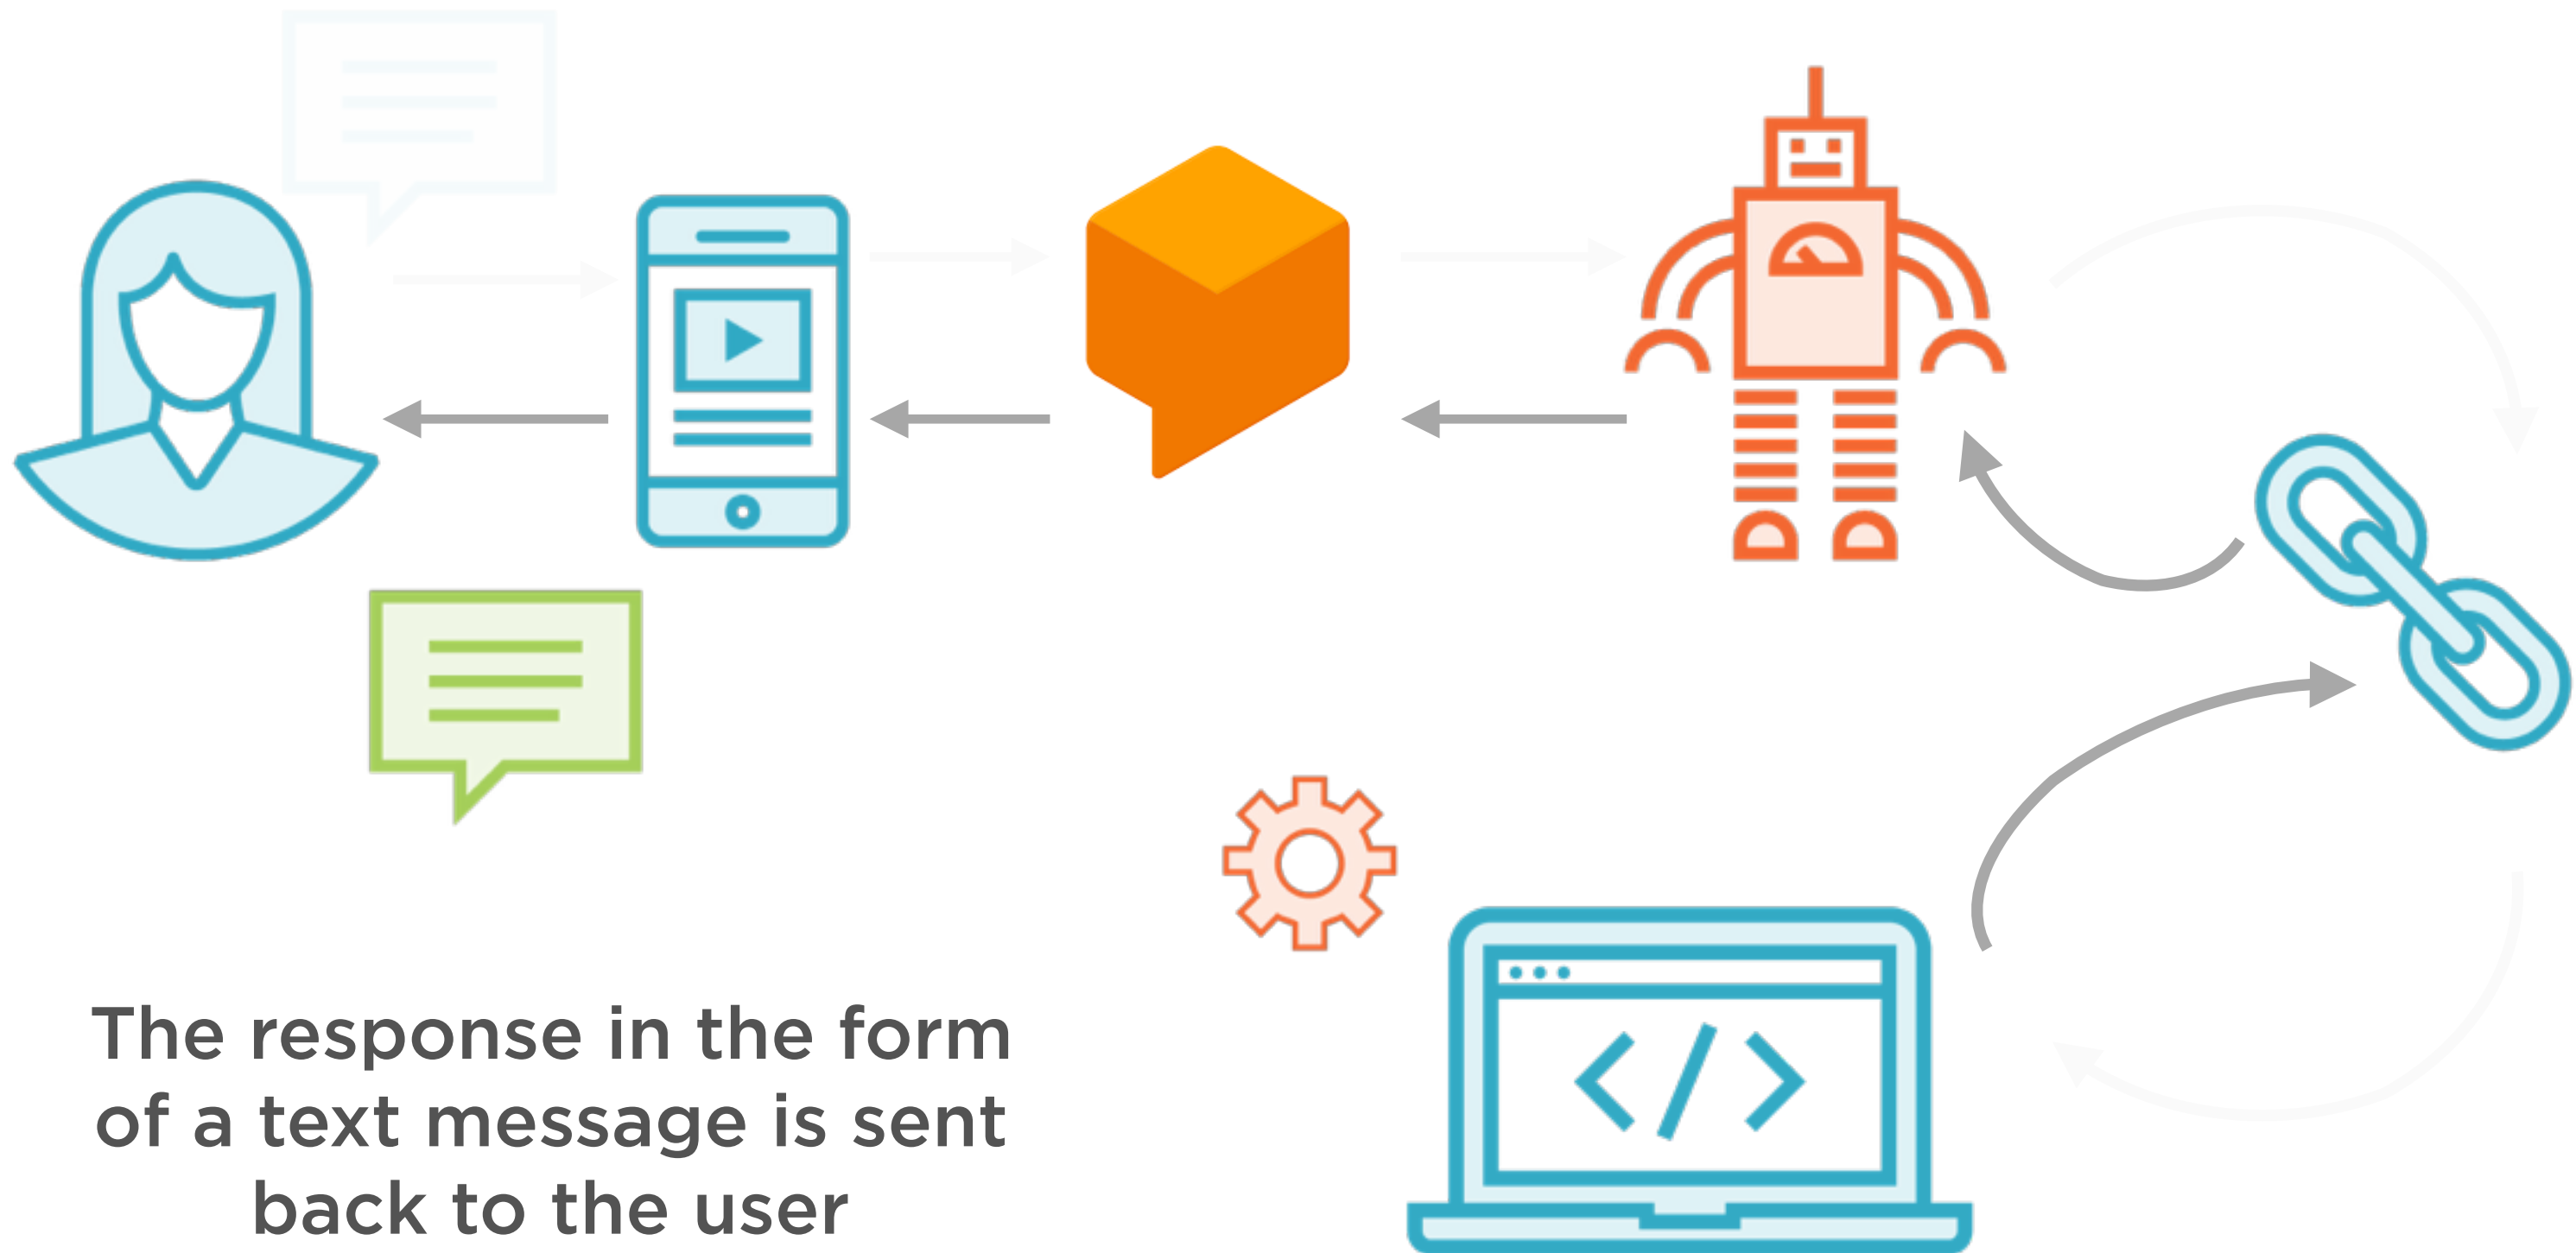

The response in the form of a text message is sent back to the user

Response

The response in the form of a text message is sent back to the user

Response

Flow of Conversation

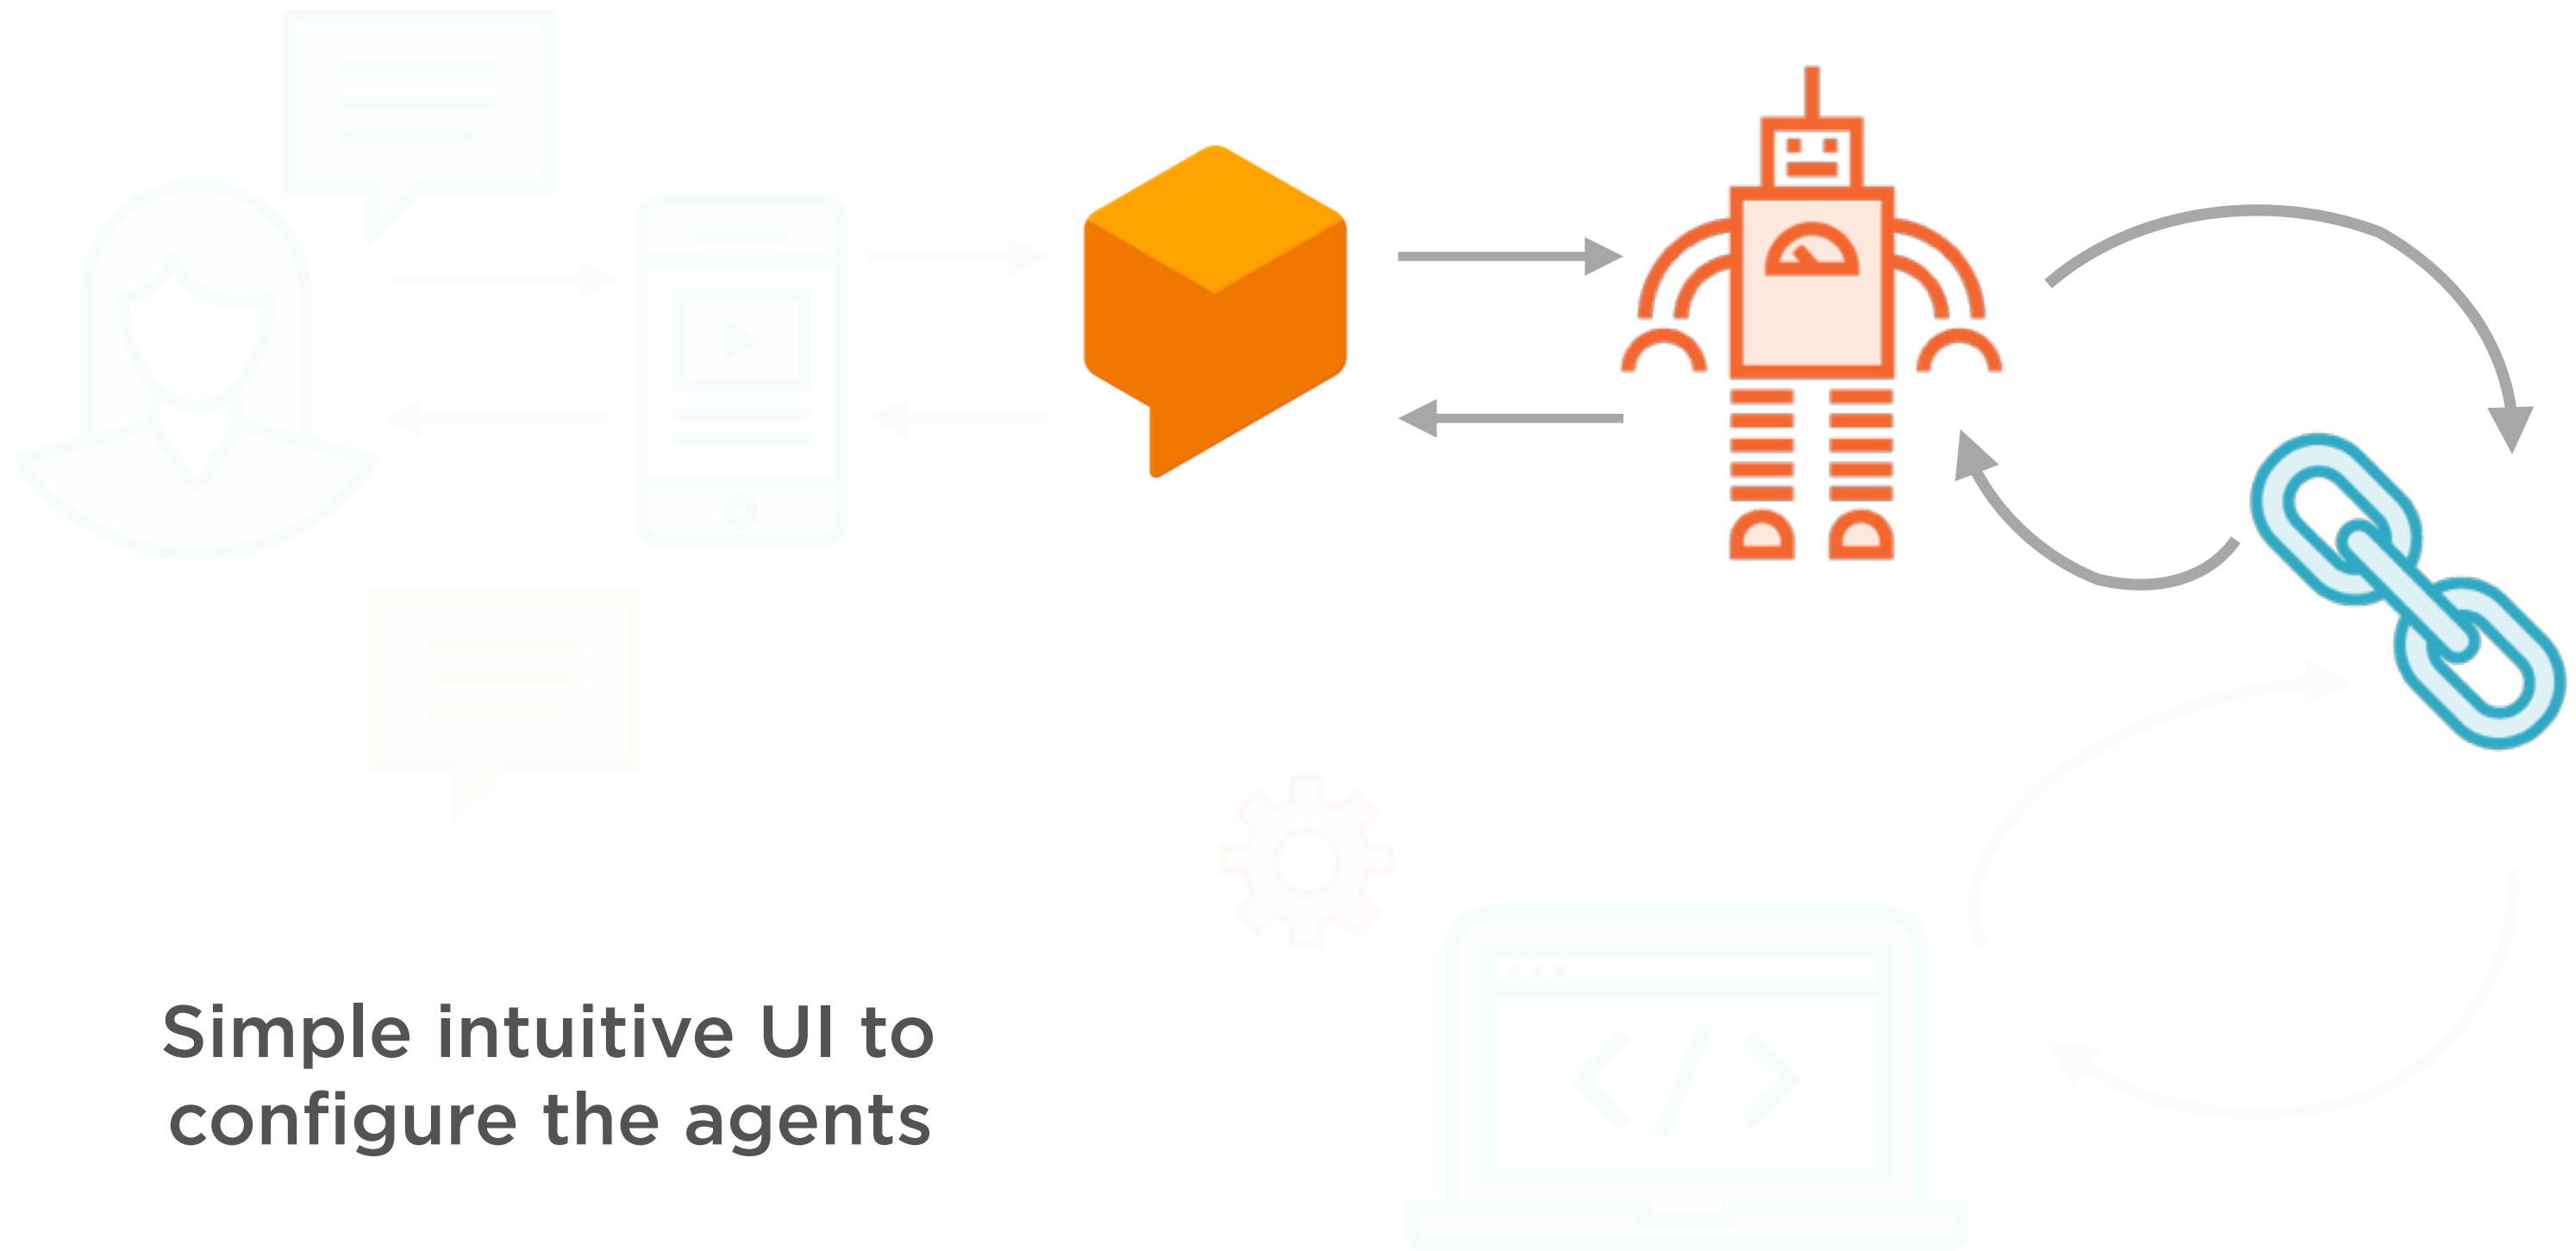

Dialogflow makes this complex
interaction very easy to configure
and set up

Flow of Conversation

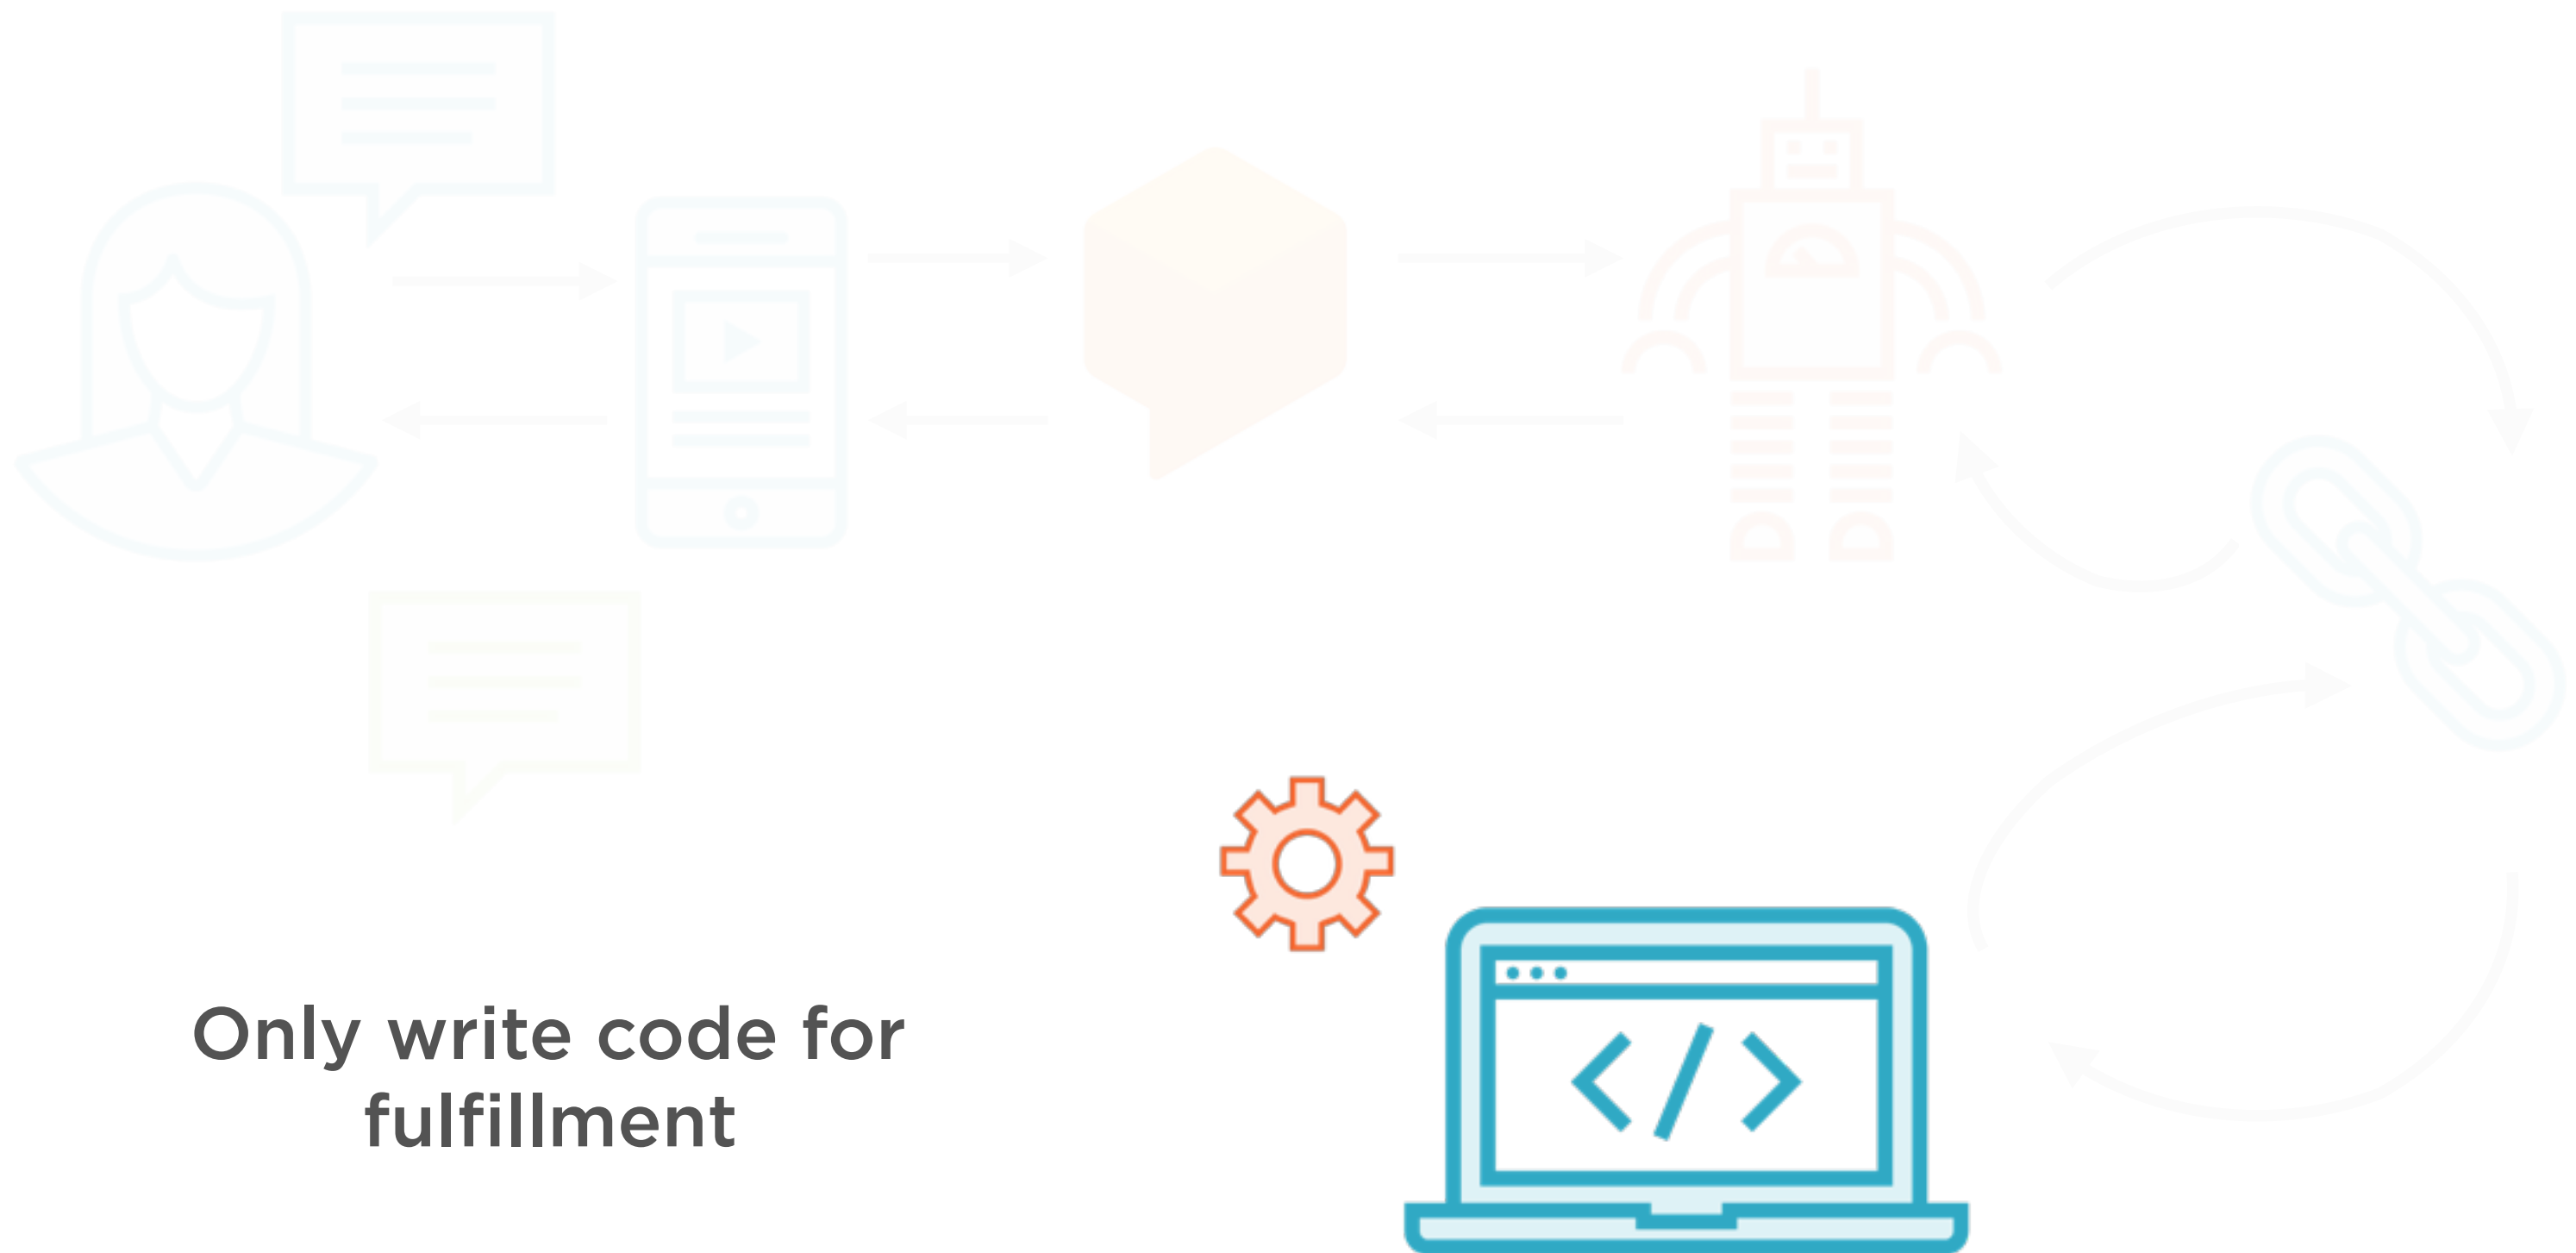

Flow of Conversation

**Simple intuitive UI to
configure the agents**

Flow of Conversation

**Only write code for
fulfillment**

Demo

Set up a new Dialogflow account

**Authorize Dialogflow to manage actions
on the Google Cloud Platform**

Summary

Chatbots built using Dialogflow use sophisticated machine learning techniques

Easy and intuitive to configure and build
